MT2090 Setup

The Motorola MT2090 is a Bluetooth/WiFi wireless barcode scanner capable of scanning most formats of barcode used to identify tapes.

The MT2090 can be connected:

1. Directly to a PC via a USB Synapse,
2. Paired directly with a PC via a Bluetooth connection, or
3. Paired with a pairing cradle unit, which then connects to a PC via a USB Synapse.

It is recommended that a pairing cradle be used as this allows wireless flexibility without the technical overhead of having to pair the scanner directly to a PC via Bluetooth (many corporate PCs also don't have Bluetooth adapters).
