Query Exception Table

The Display Query Exception Table function displays a list of movements that will receive an error when the Start Scan function is run in Query Mode by the current Checkpoint client.

These exceptions are set by a QueryExceptions.txt file located in the CheckPoint install directory.

QueryExceptions.txt Syntax

The QueryExceptions.txt file should have the following Syntax: Customer Filter,Media Filter,Volume Filter,Sending Repository-ID Filter,Receiving Repository-ID Filter For example: ACME,LTO,???[0-5]??L4,*,OFFS TapeTrack Filters may be used at any variable in the QueryExceptions.txt file.
