# TMSS10Custom_BillByAge

TMSS10Custom_BillByAge will produce TapeTrack Billing XML records based on the length of time a Volume has been in a Repository.

## Synopsis

```
TMSS10Custom_BillByAge [-R date range] [-S logon string] [-V volume filter]
[-a actual repository] [-f template file]
```

## Options

- -R Specifies the date range.
- -S The Logon string argument sets the Server Logon Information
- -V Volume Filter which can be used to filter the traversal of Customer, Media, Volume, Repository and Flag values.
- -a Actual Repository filter
- -f XML template file (default = $template.xml)

If an argument value starts with the value `FI:`, the value for that attribute will be read from the file name specified immediately after it. For example, if a file named ACME_volumes has the content `ACME_*.*`, specifying `FI:/etc/ACME_volumes` will have the same effect as `-V ACME.*.*`. Using `FI:` to refer to a file for an attribute value works for all attributes.

If the pattern being matched starts with *LIST: then rather than matching the literal value, each record in the file specified as *LIST:filename will be tested. If one matches the match will succeed.

### Technical Support

The TapeTrack Software is commercially supported by a full time help desk staff.

If you are experiencing problems or want some advice on how to configure or use the product please see the Accessing Technical Support page.

### Exit Statuses

1. **zero** Program has ended successfully.
2. **non-zero** Program has not ended successfully.

### Environment

### Files

**stdout:** Output Reports.
**stderr:** Diagnostic messages.
**stdin:** Program input.
