

TMSS10DRP_BRMS

Synopsis

TMSS10DRRP_BRMS [-h do not print header & Footer] [-u unique volume ID]

Description

Extracts critical Volume information from a BRMS Disaster Recovery Plan File

Options

- -h Do not print header and footer (default = false)
- -u Unique volume ID's (default = false).

Technical Support

The TapeTrack Software is commercially supported by a full time help desk staff. If you are experiencing problems or want some advice on how to configure or use the product please see the [Accessing Technical Support](#) page.

Exit Statuses

1. **zero** Program has ended successfully.
2. **non-zero** Program has not ended successfully.

Environment

Files

stdout: Output Reports.

stderr: Diagnostic messages.

stdin: Program input.

TMSSAPILOGDIR If defined the program will write out a trace file to this directory.

TMSSBEEP If defined the program will beep whenever an error occurs.

TMSSNOMD5 If defined the program will not MD5 hash passwords before sending them to the TapeTrack Server. This is required when relying on Windows Active Directory authentication. It should be noted that although the password is not being hashed, it is still being encrypted during

transmission.

TMSSPWPATH When no password value is passed in the logon string the program will look for the password in file \etc\tapetrack\user, where user is the user value passed in the logonstring. If you wish to change this default path, you can set the path in **TMSSPWPATH**. **TMSSSERVERPROXY** If defined the program will route all TapeTrack TCP/IP traffic through a HTTPS proxy. The value of the variable should be in the format user:password@host:port. To debug the proxy connection use variable **TMSSAPILOGDIR**.

Example

Command line syntax

```
TMSS10DRP_BRMS -S user:-password@server -h
```
