TMSS10ListContainer

TMSS10ListContainer lists containers and any assigned Volumes

Synopsis

```
TMSS10ListContainer [-A attribute index] [-S logon string] [-V volume filter]
[-c configuration file] [-s sync friendly output
```

Options

- -A Extended Attribute index (default = 0).
- -S The Logon string argument sets the Server Logon Information.
- -V Volume Filter which can be used to filter the traversal of Customer, Media, Volume, repository and flag values.
- -c The config file argument specifies the path to the Batch Configuration File. The Batch Configuration File allows you to perform advanced traversal of Customer, Media and Volumes, perform advanced Barcode pre and post processing and route program output to syslogd.
- -s Produces output in a sync friendy format, including listing container-id relisted for each Volume entry.

If an argument value starts with the value `FI:`, the value for that attribute will be read from the file name specified immediately after it. For example, if a file named ACME_volumes has the content `ACME_*.*`, specifying `FI:/etc/ACME_volumes` will have the same effect as `-V ACME.*.*`. Using `FI:` to refer to a file for an attribute value works for all attributes.

If the pattern being matched starts with *LIST: then rather than matching the literal value, each record in the file specified as *LIST:filename will be tested. If one matches the match will succeed.

Technical Support

The TapeTrack Software is commercially supported by a full-time help desk staff.

If you are experiencing problems or want some advice on how to configure or use the product please see the Accessing Technical Support page.

Files

stdout: Output Reports.
stderr: Diagnostic messages.

Example

Standard format output

Command line syntax

```
TMSS10ListContainer -S user:-password@server
```

Output

```
```

Sync friendly format output

Command line syntax

```
TMSS10ListContainer -S user:-password@server
```

Output

```
```
