TMSS10ListOutages

TMSS10ListOutages lists Server outages within the specified date range

Synopsis

```
TMSS10ListOutages [-R date range] [-S logon string] [-c configuration file]
```

Options

- `-R` Specifies the date range.
- `-S` The Logon string argument sets the Server Logon Information
- `-c` The config file argument specifies the path to the Batch Configuration File. The Batch Configuration File allows you to perform advanced traversal of Customer, Media and Volumes, perform advanced Barcode pre and post processing and route program output to syslogd.

If an argument value starts with the value `FI:`, the value for that attribute will be read from the file name specified immediately after it. For example, if a file named ACME_volumes has the content `ACME_*.*`, specifying `FI:/etc/ACME_volumes` will have the same effect as `-V ACME.*.*`. Using `FI:` to refer to a file for an attribute value works for all attributes.

If the pattern being matched starts with *LIST: then rather than matching the literal value, each record in the file specified as *LIST:filename will be tested. If one matches the match will succeed.

Technical Support

The TapeTrack Software is commercially supported by a full time help desk staff.

If you are experiencing problems or want some advice on how to configure or use the product please see the Accessing Technical Support page.

Exit Statuses

1. **zero** Program has ended successfully.
2. **non-zero** Program has not ended successfully.

Environment

Files

stdout: Output Reports.
stderr: Diagnostic messages.
stdin: Program input.

Example

Command line syntax

```
TMSS10ListOutages -S user:-password@server -R "*-2:*"
```

Output

```

            System: TapeTrack
 Report Description: TapeTrack Outage Report
       Report Width: 90 bytes

 Seq.   Start               End                 Past
