

TMSS10LogStatsProcess

TMSS10LogStatsProcess processes a TapeTrack Statistics file, apply calculations and produce a report in XML format.

Synopsis

```
TMSS10LogStatsProcess [-M customer map file] [-N no xml preamble] [-P package map] [-X xml stylesheet] [-c config file] [-i input ttstats file] [-l list stats definition language syntax]
```

If an argument value starts with the value `FI:`, the value for that attribute will be read from the file name specified immediately after it. For example, if a file named `ACME_volumes` has the content `ACME_*. *`, specifying `FI:/etc/ACME_volumes` will have the same effect as `-V ACME. *. *`. Using `FI:` to refer to a file for an attribute value works for all attributes.

If the pattern being matched starts with `*LIST:` then rather than matching the literal value, each record in the file specified as `*LIST:filename` will be tested. If one matches the match will succeed.
