TMSS10MoveList

This program produces a report of all Volumes that have a 'Move' status.

Synopsis

```
TMSS10MoveList [-S logonstring] [-V volumefilter] [-C option-C] [-T option-T]
[-v] [-c configfile]
```

Description

TMSS10MoveList produces a report listing all tape Volumes that are in a “Move Status”, i.e. they have a different Current and Target Repository.

Options

The options which apply to the TMSS10MoveList command are:

- -S The logonstring argument sets the Server logon information in the format
- -V The volumefilter argument sets the Volume Filter which can be used to filter the traversal of Customer, Media and Volume values.
- -C Current Repository Filter.
- -T Target Repository Filter.
- -v Print Virtual Locations.
- -c The configfile argument specifies the path to the Batch Configuration File.

Exit Status

zero Program has ended successfully. non-zero Program has not ended successfully.

Environment

TMSSAPILOGDIR If defined the program will write out a trace file to this directory. TMSSBEEP If defined the program will beep whenever an error occurs. TMSSNOMD5 If defined the program will not MD5 hash passwords before sending them to the TapeTrack Server. This is required when relying on Windows Active Directory authentication. It should be noted that although the password is not being

hashed, it is still being encrypted during transmission. TMSSPWPATH When no password value is passed in the logon string the program will look for the password in file \etc\tapetrack\user, where user is the user value passed in the logonstring. If you wish to change this default path, you can set the path in TMSSPWPATH. TMSSSERVERPROXY If defined the program will route all TapeTrack TCP/IP traffic through a HTTPS proxy. The value of the variable should be in the format user:password@host:port. To debug the proxy connection use variable TMSSAPILOGDIR.

Files

stdout Output Reports. stderr Diagnostic messages. stdin Program input.
