

TMSS10MoveLocation

TMSS10MoveLocation puts selected [Volumes](#) in a move from one [Repository](#) to another.

Synopsis

TMSS10MoveLocation [-C check if volume is assigned to a container] [-M move only if container moving] [-S logon string] [-T move only if assigned container target matches] [-V volume] [-X skip volumes assigned to a container] [-c configuration file] [-e exclude volumes already moving] [-f from repository] [-l apply move lock during move] [-t to repository]

Options

- -C Move [Volume](#) only when assigned Container is moving and matches move requirements.
- -S The Logon string argument sets the [Server Logon Information](#).
- -V [Volume Filter](#) which can be used to filter the traversal of [Customer](#), [Media](#), [Volume](#), [Repository](#) and [Flag](#) values.
- -X Skip any volumes already assigned to a container.
- -c The config file argument specifies the path to the Batch Configuration File. The Batch Configuration File allows you to perform advanced traversal of [Customer](#), [Media](#) and [Volumes](#), perform advanced Barcode pre and post processing and route program output to syslogd.
- -e Exclude any [Volumes](#) that are already in a Move Status.
- -f [Repository](#) to Move [Volumes](#) from.
- -l Apply a move-lock to [Volumes](#) during move.
- -t [Repository](#) to move [Volumes](#) to.

If an argument value starts with the value FI:, the value for that attribute will be read from the file name specified immediately after it. For example, if a file named ACME_volumes has the content ACME_*.*, specifying FI:/etc/ACME_volumes will have the same effect as -V ACME.*.*. Using FI: to refer to a file for an attribute value works for all attributes.

If the pattern being matched starts with *LIST: then rather than matching the literal value, each record in the file specified as *LIST:filename will be tested. If one matches the match will succeed.

Technical Support

The TapeTrack Software is commercially supported by a full time help desk staff.

If you are experiencing problems or want some advice on how to configure or use the product please see the [Accessing Technical Support](#) page.

Exit Statuses

- 1. **zero** Program has ended successfully.
- 2. **non-zero** Program has not ended successfully.

Environment

Files

stdout: Output Reports.
stderr: Diagnostic messages.
stdin: Program input.

Example

Command line syntax

Move all US02 LTO **Volumes** with a Barcode ending in 5L6.

```
TMSS10MoveLocation -S user:-password@server -V "US02.LT0.*5L6" -f "LIBR" -t "OFFS"
```

Output

System: TapeTrack			
Report Description: Volumes Moved			
Report Notes: From(LIBR) To(OFFS)			
Production Time: Monday, November 27, 2017 - 12:56:38 (AUS Eastern Daylight Time)			
Report Width: 92 bytes			
Seq.	Barcode	From	To
Container			

1	US02.LT0.000015L6	Library	Offsite Vault
2	US02.LT0.000035L6	Library	Offsite Vault
3	US02.LT0.000065L6	Library	Offsite Vault
