TMSS10PasswordResetDB

Synopsis

```
TMSS10PasswordReset [-i ] [-h database directory] [-p new password] [-u user for reset]
```

Description

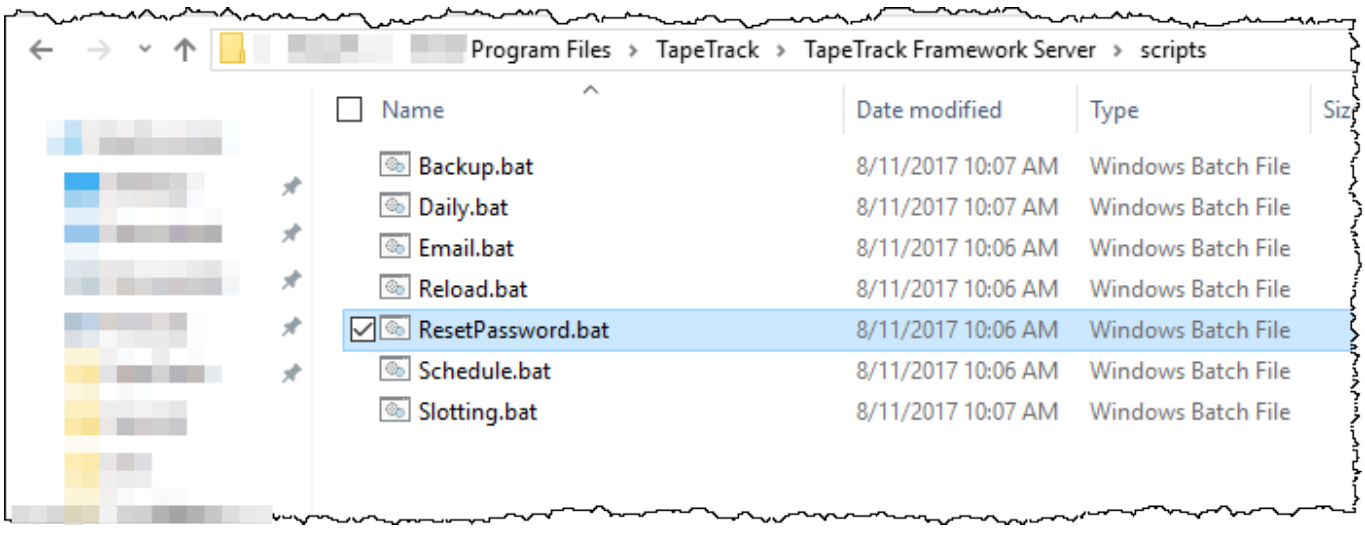

Allows a user with administrative rights to reset a users password and restore user access when access has been revoked due to multiple consecutive failed login attempts.

Options

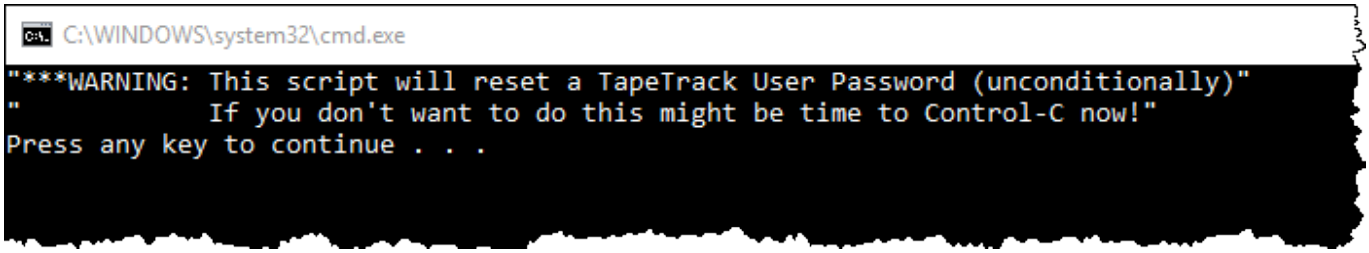

- `-h` Database home directory (default location C:\Program Files\TapeTrack\TapeTrack Framework Server\var\db).
- `-i` interactive mode true.
- `-p` New password value.
- `-u` User to reset.

Notes

To execute `TMSS10PasswordResetDB` automatically in interactive mode, run ResetPassword.bat from the TapeTrack install directory TapeTrack\TapeTrack Framework Server\script.

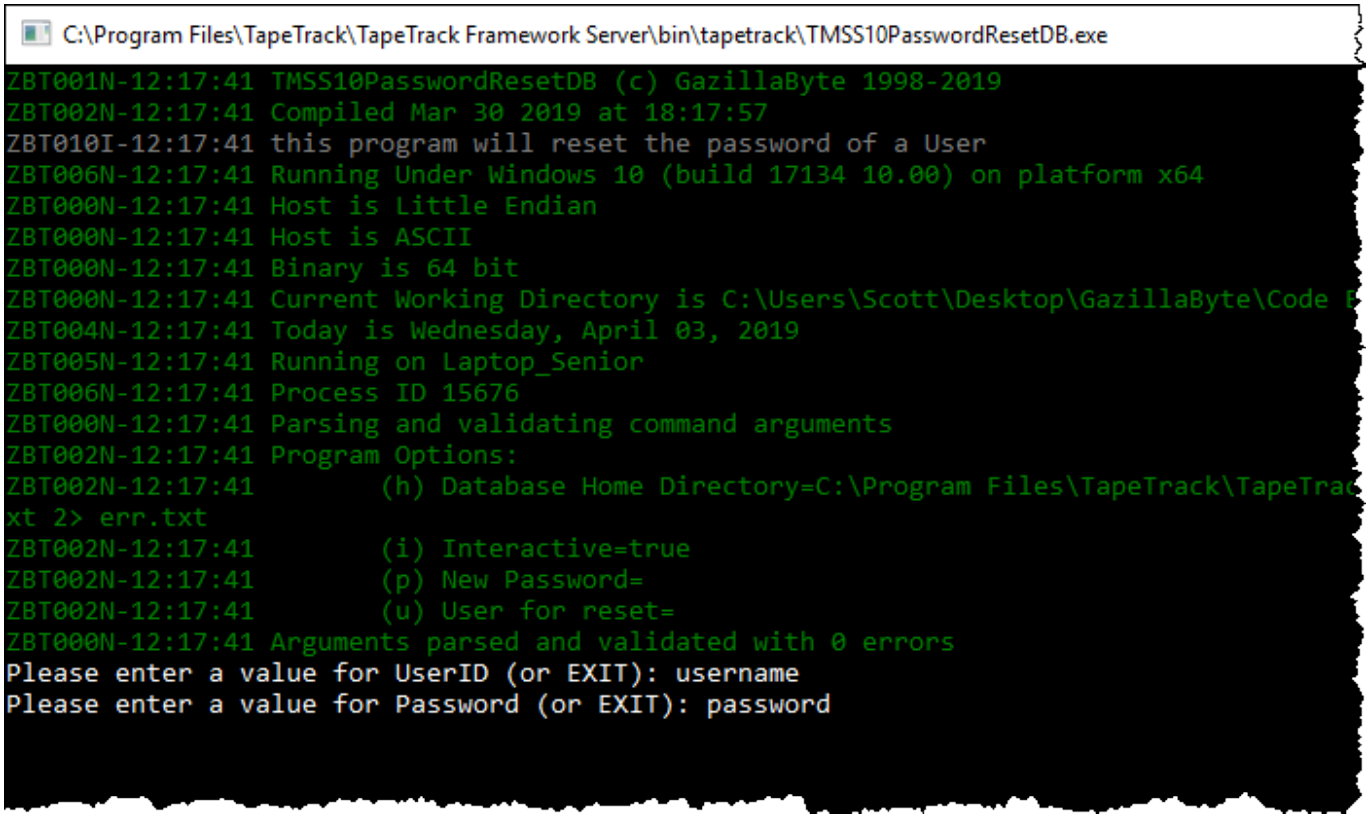

On execution of ResetPassword.bat you will be presented with a Command Prompt window asking you if you wish to proceed, press any key to continue or press Ctrl+C (or close window) to exit script before any changes are made.

Continuing the script will open a further Command Prompt and you will be asked to input User (User-ID) to reset the password for. Entering EXIT instead of a User-ID will exit the script without making any changes.

Enter Password value for the User and hit Enter on the keyboard. Entering EXIT instead of a Password will exit the script without making any changes.

User name and Password values shown are for illustration only. Replace with your required values.

Ensure you enter the User-ID correctly as the script will execute with any values but will not update the database if no matching User-ID is found.

Technical Support

The TapeTrack Software is commercially supported by a full time help desk staff. If you are experiencing problems or want some advice on how to configure or use the product please see the Accessing Technical Support page.

Exit Statuses

1. **zero** Program has ended successfully.
2. **non-zero** Program has not ended successfully.

Environment

Example

Running `TMSS10PasswordReset.bat` to invoke `TMSS10PasswordResetDB`.
