

Definition File

A Definition file is used by TapeTrack to define the format of imported data from files.

Definition files use a .ttidef prefix

Command Line programs that use a definition file will look for a file named default.ttidef in the running directory if no file name is specified in the program call.

Sample Definition File

```
<sxh> SetFile("Inventory.csv");  
  
SetCSVDelimiter(",");  
  
SetLiteral(CUSTOMER, "US01"); SetLiteral(MEDIA, "LTO");  
  
Extract(VOLUME, 1, 25, 0); RemoveSpaces(VOLUME);  
  
Extract(REPOSITORY, 2, 20, 0); RemoveSpaces(REPOSITORY);  
  
</sxh>
```
