Scan File

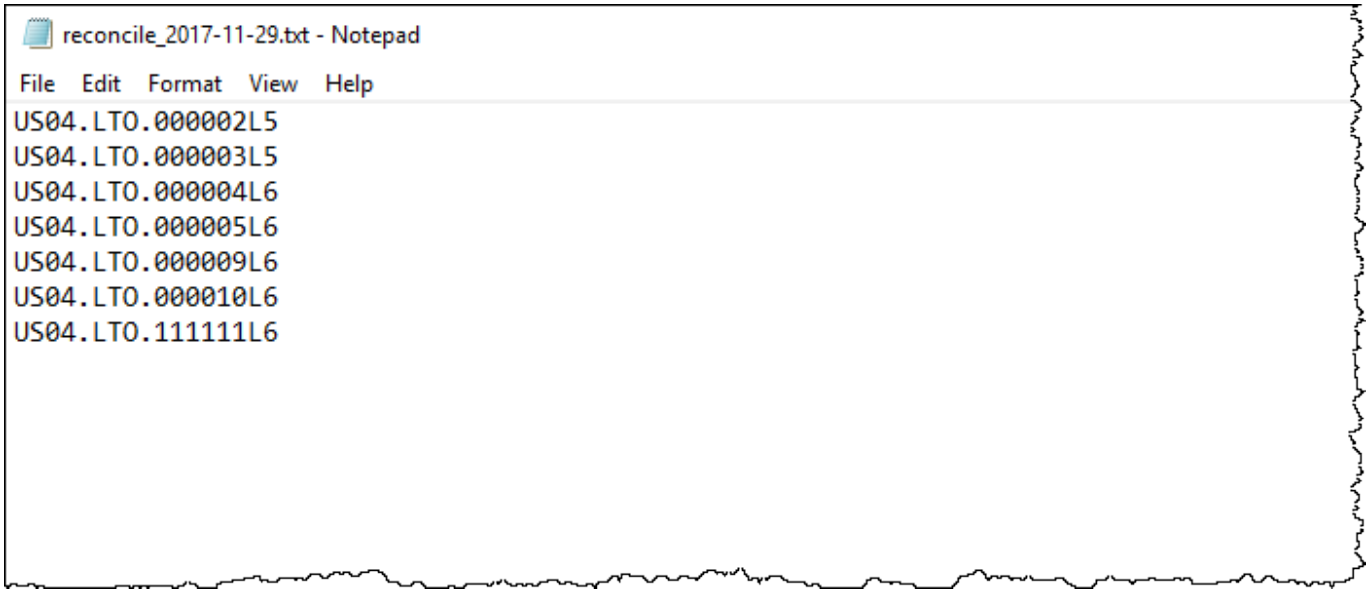

A scan file is a listing of volume ID's that, through TapeTrack parsing, is converted in to a Scan-map of fully qualified barcodes for input into command line processes such as repository reconciliation.

The TapeTrack Scan File Format allows you to specify lists of TapeTrack compatible Barcodes, along with comments and Barcode defaults.

Environmental Variables will also be resolved before processing any Barcode defaults or Volume Barcodes. The syntax supports:

- Barcodes: that are to be parsed according to TapeTrack Barcode logic.
- Customer-ID/Media-ID defaults: that set the Customer-ID and/or Media-ID where those values can not be determined by TapeTrack Barcode parsing.
- Comments: that are to be ignored by any processing logic
