

Scan-File

A Scan-File is a listing of [Volume-ID's](#) that, through TapeTrack parsing, is converted in to a [Scan-map](#) of [Fully Qualified Barcodes](#) for input into [Command Line processes](#).

The TapeTrack Scan-File Format allows you to specify lists of TapeTrack compatible Barcodes, along with comments and Barcode defaults.

[Environmental Variables](#) will also be resolved before processing any [Barcodes](#) defaults or [Volume Barcodes](#). The syntax supports:

- [Barcodes](#): that are to be parsed according to TapeTrack [Barcode Logic](#).
- [Customer-ID/Media-ID](#) defaults: that set the [Customer-ID](#) and/or [Media-ID](#) where those values can not be determined by TapeTrack [Barcode Parsing](#).
- Comments: that are to be ignored by any processing logic (any line starting with a #).

Scan-File

Scan files can either be Volume-ID's ready to process or a definition file (.ttidef) that translates an input file to parse the Volume-ID's before processing.

Direct Input

Translated Input File

Instead of passing a data file directly to the TapeTrack process as a scan file, a definition file is specified as the Scan file to interpret the input file for processing.

Input File - input.csv <sxh> TSMLIB_1,718315,Private,LG1SACTSM12,Data,1,058,LTO

Definition File

```
<sxh> SetFile("input.csv"); SetLiteral(CUSTOMER, "US01"); SetLiteral(MEDIA, "LTO"); # # Set the
delimiter to a CSV # SetCSVDelimiter(","); # # Set the Volume-ID to the 2nd column #
Extract(VOLUME, 2, 8, 0); # # Translate the Volumes so that they have the correct suffix #
AddTranslation(VOLUME, "L?????", "*L5");
```
