Attribute List Values

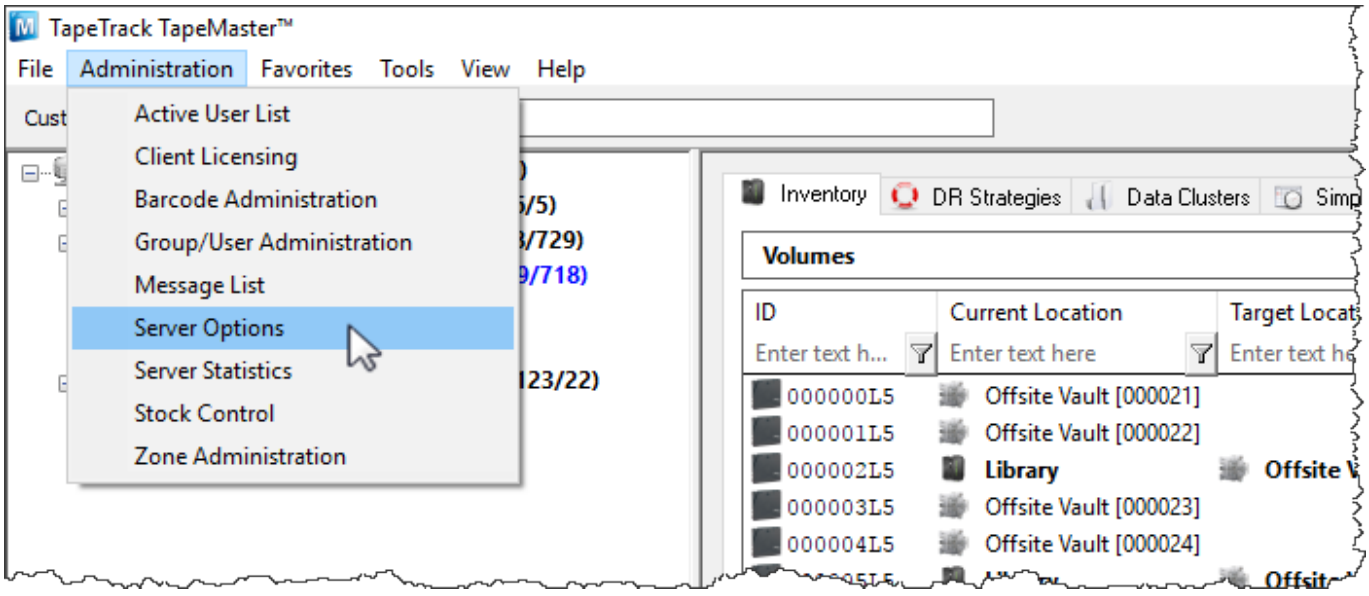

Attribute Lists allow you to set a defined list of attribute values for a user to select from. This ensures that all attribute values entered against a Volume are limited to supplied list, removing the ability to enter unwanted values or spelling differences (eg Removed or removed) and increasing productivity by removing the need to retype common attribute values.

The following example illustrates the creation and implementation of two Attribute Lists, `Weekly Backup` with the values of the days of the week and `Manufacturer` with the values of the Volume brands Dell, IBM, Imation and Sony.

Setting The Attribute List

The Server Options allow global settings for Customer, Data Clusters and Simple Management Rules in one location.

To open the Server Options in TapeMaster, select `Administration` → `Server Options` from the main menu.
