Attribute List Values

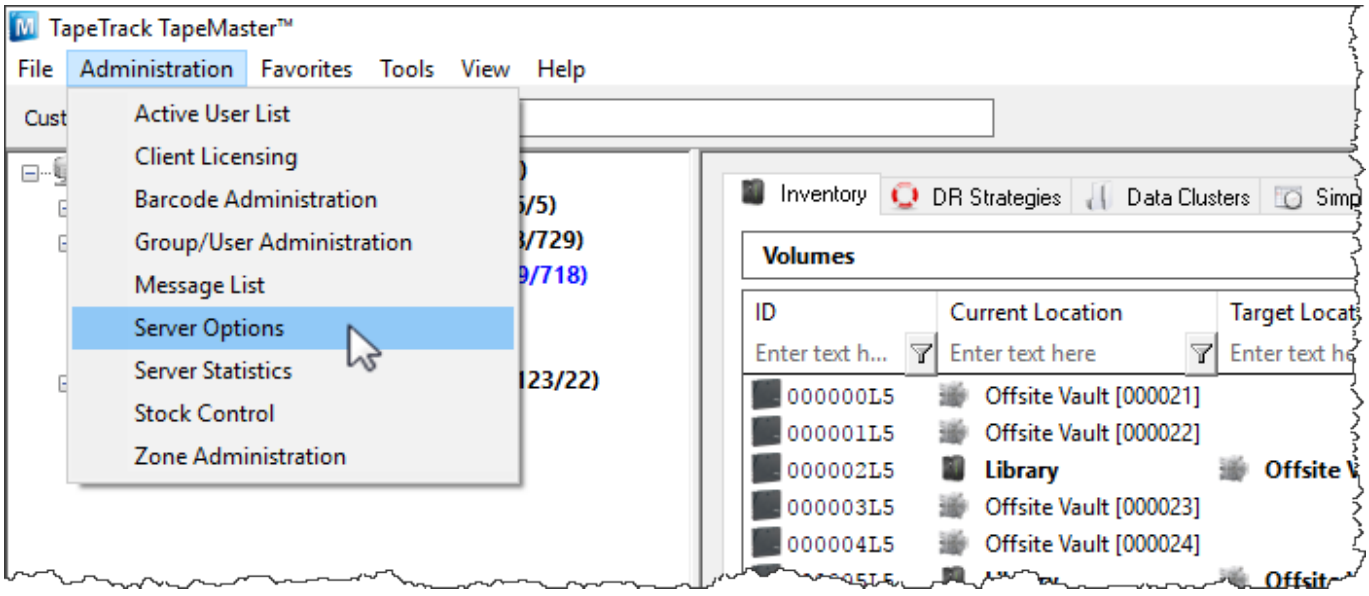

Attribute Lists allow you to set a defined list of attribute values for a user to select from. This ensures that all attribute values entered against a Volume are limited to supplied list, removing the ability to enter unwanted values or spelling differences (eg Removed or removed) and increasing productivity by removing the need to retype common attribute values.

The following example illustrates the creation and implementation of two Attribute Lists, `Weekly Backup` with the values of the days of the week and `Manufacturer` with the values of the Volume brands Dell, IBM, Imation and Sony.

Setting The Attribute List

The Server Options allow global settings for Customer, Data Clusters and Simple Management Rules in one location.

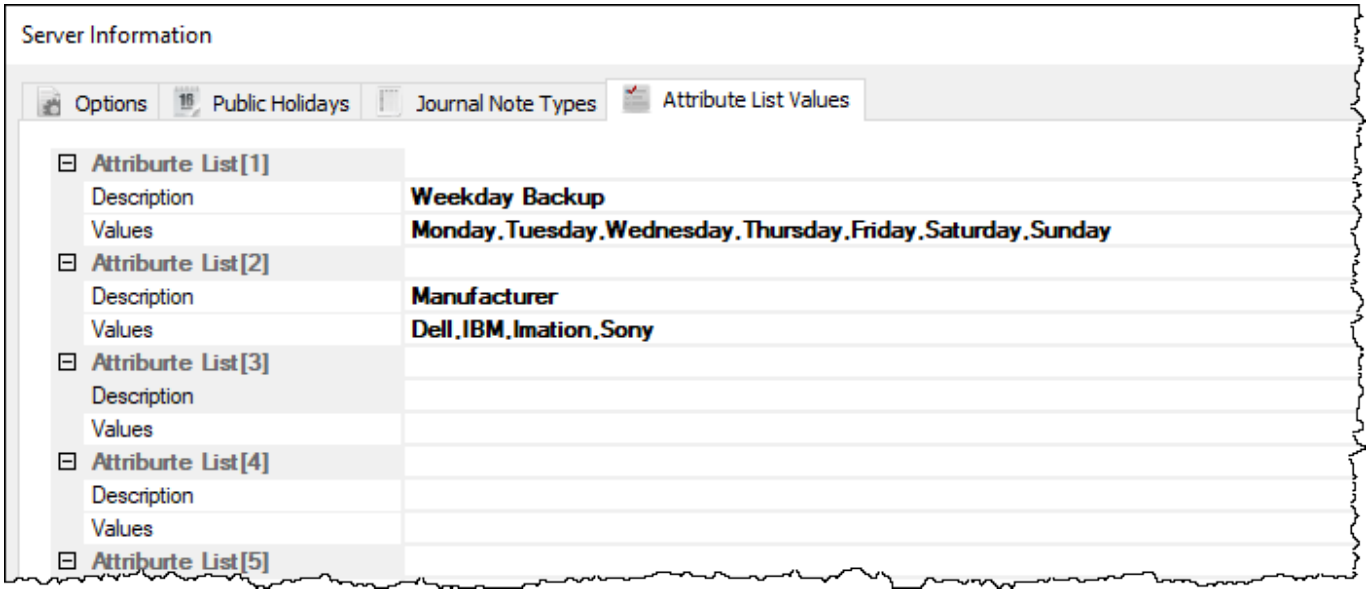

To open the Server Options in TapeMaster, select `Administration` → `Server Options` from the main menu.

Select the tab `Attribute List Values`

In the section `Attribute List [1]`, enter the string `Weekly Backup` into the field `Description`, along with the Attribute Values separating values by comma's, `Monday,Tuesday,Wednesday,Thursday,Friday,Saturday,Sunday` into the field `Values`.

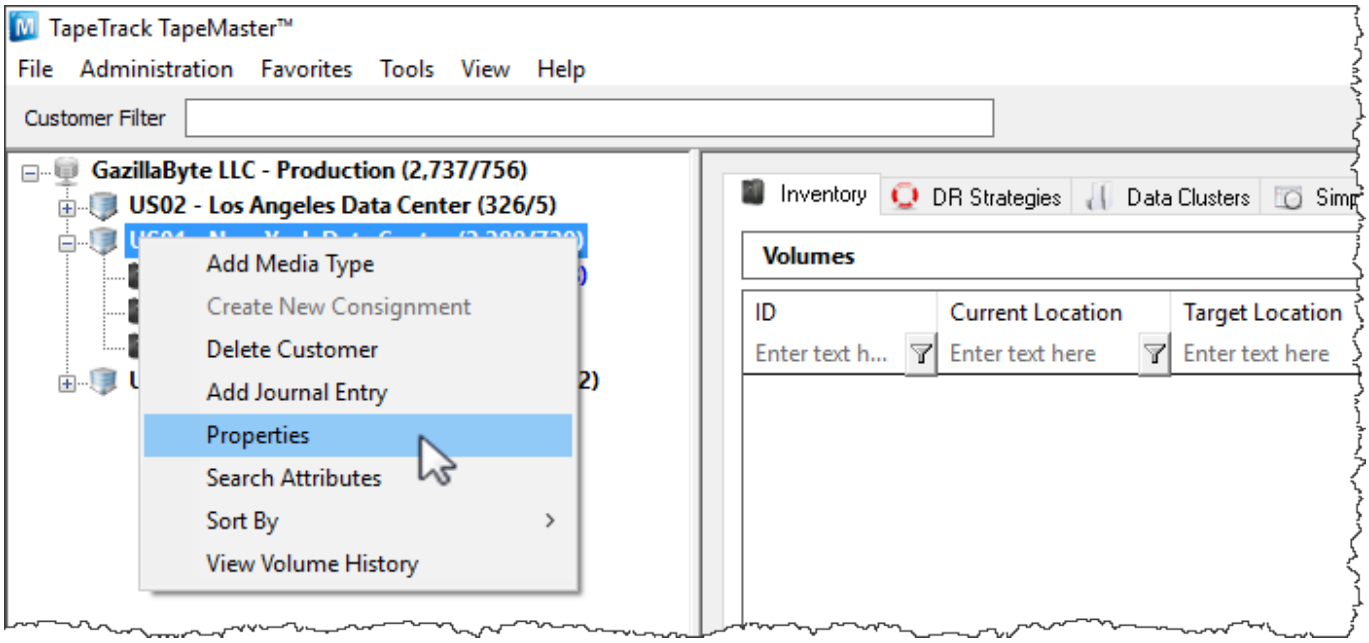

In the section `Attribute List [2]`, enter the string `Manufacturer` into the field `Description`, along with the Attribute Values, separating values by comma's, `Dell,IBM,Imation,Sony`.

Once all Lists have been added, click Save to add Values to the Framework Server.

Adding Extended Attributes To TapeMaster

Right click the required Customer from the Customer Tree and select `Properties`

From the `Edit Customer` window, select the `Attributes` tab.

Click Save to update the information in TapeTrack.
