Data Protector Sync Cookbook

Data Protector is a HP enterprise backup solution and is available for Windows, UNIX and Linux.

The omnirpt command

The `omnirpt` command generates various reports about the Data Protector environment

<sxh> omnirpt -report media_list -tab > var\dataprotector.txt </sxh>

Example omnirpt output

Converting omnirpt tab file to Fixed length file

Output from omnirpt, while tab delimitered, can produce offset columns depending on string lengths. To ensure the column offsets are consistent the output is passed through TMSS10CSV2Fixed.

Run TMSS10CSV2Fixed directing the file `dataprotector.csv` through `stdin` to get a starting point for columns and offset values, adjust the offsets to match the data you wish to import, omitting data from irrelevant columns.

<sxh> TMSSDELIMETER=TAB

TMSS10CSV2Fixed < dataprotector.csv </sxh>
