

Data Protector Sync Cookbook

Data Protector is a HP enterprise backup solution and is available for Windows, UNIX and Linux.

The omnirpt command

The omnirpt command is available on systems with the Data Protector User Interface component installed.

The omnirpt command generates various reports about the Data Protector environment

```
<sxh> omnirpt -report media_list -tab > var\dataprotector.txt </sxh>
```

Example omnirpt output

```
<sxh> #List of Media #Cell Manager: gazillabyte.tapetrack.co #Creation Date: 9/13/2018 2:00:12 PM

Converting omnirpt tab file to Fixed length file

Output from omnirpt, while tab delimited, can produce offset columns depending on string lengths. To ensure the column offsets are consistent the output is passed through [TMSS10CSV2Fixed](#).

Run [TMSS10CSV2Fixed](#) directing the file dataprotector.csv through stdin to get a starting point for columns and offset values, adjust the offsets to match the data you wish to import, omitting data from irrelevant columns with the offset 0 0.

```
<sxh> TMSSDELIMITER=TAB

TMSS10CSV2Fixed < dataprotector.csv </sxh>

<sxh>
```

System: TapeTrack

Report Description: CSV Statistics

Production Time: Monday, October 01, 2018 - 13:46:07 (AUS Eastern Standard Time)

Report Width: 120 bytes

Seq. Min. Max. Heading Value --- --- ---

0	11	27	# Medium ID
1	5	19	label
2	0	8	location
3	4	28	Status
4	9	20	Protection
5	9	10	Used [MB]
6	10	20	Total [MB]
7	9	20	Last Used
8	4	11	Pool
9	4	11	Type

Suggested Usage:

```
tmss10csv2fixed 0 27 28 19 48 8 57 28 86 20 107 10 118 20 139 20 160
11 172 11
```

```
</sxh>
```

Changing the offset values to pick up volume ID (column 2, offset 30 length 8), location (column 3, offset 48, length 8) and description (column 9, offset 160, length 12).

```
<sxh> TMSS10CSV2Fixed 0 0 30 8 48 8 0 0 0 0 0 0 0 0 0 160 12 0 0 < dataprotector.csv >
dataprotectorFixed.txt

</sxh>
```

Sample output with selected columns

```
<sxh> Label Location Pool 000005L7 LIB_1244 LIB Daily 000006L7 LIB Daily 000007L7 LIB_1244 LIB
Daily 000008L7 LIB_1244 LIB Daily 000009L7 LIB Daily 000010L7 LIB Daily 000011L7 LIB_1244 LIB
Daily 000012L7 LIB_1244 LIB Daily 000013L7 LIB Daily 000014L7 LIB_1244 LIB Daily </sxh>
```

Synchronization

You will need to install the [TapeTrack Sync software](#) to complete these instructions.

Synchronization with TapeTrack is performed by calling the [TMSS10Sync](#) command line program, along with:

1. The fixed width text file produced by pre-processing the omnirpt output.
2. Command line arguments that instruct the program how to process volumes.
3. A synchronization definition file that instructs the program how to interpret the omnirpt output.

Example Command Line Arguments

```
<sxh plain;> TMSS10Sync -d dp.ttidef -a -S batch:-password@server < dataprotectorFixed.txt </sxh>
```

Where:

- -d is the path to the Synchronization Definition File.
- -a tells the program to add new tape volumes if they are encountered.
- -S tells the program what server to connect to.
- dataprotectorFixed.txt is the omnirpt output that has been pre-processed through the [TMSS10CSV2Fixed](#) program

Example Synchronization Definition

```
<sxh> # # Set the Customer and Media as literal values as they never change #  
SetLiteral(CUSTOMER, "ACME"); SetLiteral(MEDIA, "LTO"); # # Set the Description to the Pool Name  
# Extract(DESCRIPTION, 12, 40, 0); # # Get the Volume-ID # Extract(VOLUME, 1, 6, 0); # # Get the  
Repository from a translated location Name # Extract(REPOSITORY, 12, 40, 0);  
AddTranslation(REPOSITORY, "*Lib*", "LIBR"); AddTranslation(REPOSITORY, "*", "OFFS"); # </sxh>
```
