Simple Management Cookbook

The purpose of this section is to provide guidance on how to configure Simple Management to automate the scheduled movement of media from one repository to another.

The prerequisites being that the following option would be set in properties for the required repositories associated with the intended Simple Management rule, as per the example image below.

- Force Simple Management option is set to True.
- Next Repository option is set to the next repository in the topology as the intended rule would dictate.

Every 2nd Wednesday of the month

First of all check and confirm that the properties of the required repositories have had the Force Simple Management option set to True, and the Next Repository option is set to the repository as per the intended rule.

Select the Simple Management tab above the Inventory window to the right of the Customer tree view. Click with the right hand mouse button and select Add.

This will open the Edit New Simple Management window and display the Identity tab. On this tab enter an appropriate description into the Description field. In this example 'Return 2nd Wednesday' has been entered.

Next select the Options tab, and set the following.

- Expand the Exclusion Days and set to True for Wednesday.
- Set Movement Direction from sending repository (SITE) to receiving repository (OFFS).
- Set Volume Attributes, Media-ID Filter to your required media or container ID, (We have used CTNR in this example).
- Set Volume Attributes, Volume-ID Filter to *, (The wildcard will select all volume-ID's).

Next select the Calculations tab, and set the following.

The 2nd last day of each month
