

Adding a Desktop Server Connection via the Configuration File

Server Connection details can also be hard-coded into the [Desktop Software Configuration File](#).

The syntax for these settings is:

```
<sxh> servers = {
```

```
  Server1 = { host = "odpapi-test.tapetrack.com"; };  
  Server2 = { host = "odpapi-test.tapetrack.com"; port=433; proxy=true; };
```

```
}; </sxh>
```
