Adding a Desktop Server Connection via the Configuration File

Server Connection details can also be hard-coded into the Desktop Software Configuration File.

All server details shown are examples only. You will need to insert your own values in order to make a successful connection to your server.

The syntax for these settings is:

<sxh> servers = {

```
Server1 = { host = "odpapi-test.tapetrack.com"; };
Server2 = { host = "odpapi-test.tapetrack.com"; port=433; proxy=true; };
```

}; </sxh>
