Disabling Update Check

Overview

On startup TapeTrack software checks via internet connection whether an update is available. This function can cause some security setups to issue a warning. This can be avoided by setting a registry key to disable the update check.

Changes made to the Windows registry happen immediately, and no backup is automatically made. Do not edit the Windows registry unless you are confident about doing so.

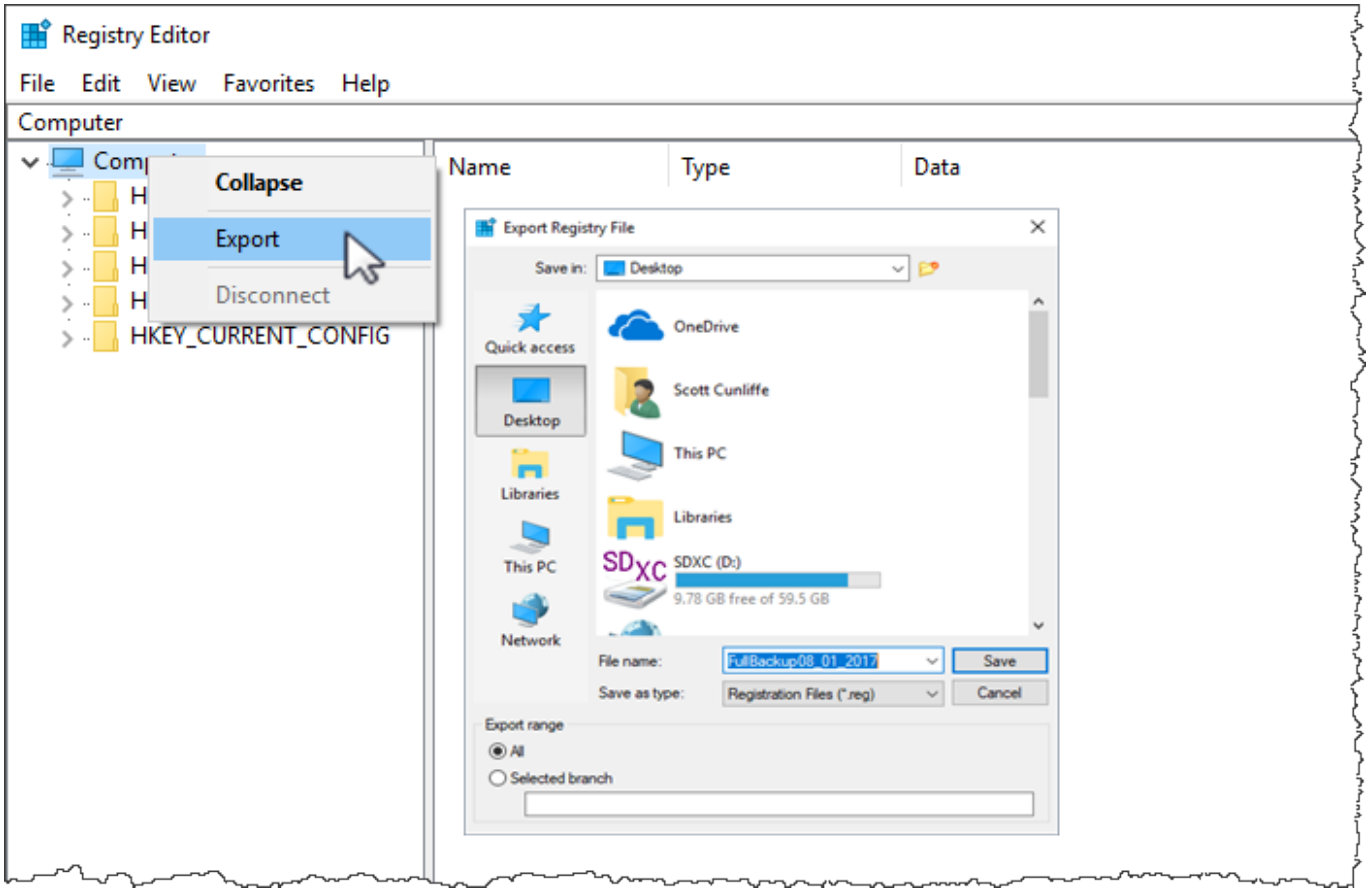

Microsoft have issued the following warning with respect to the Registry Editor:
“Using Registry Editor incorrectly can cause serious, system-wide problems that may require you to re-install Windows to correct them. Microsoft cannot guarantee that any problems resulting from the use of Registry Editor can be solved. Use this tool at your own risk.”

Registry Backup

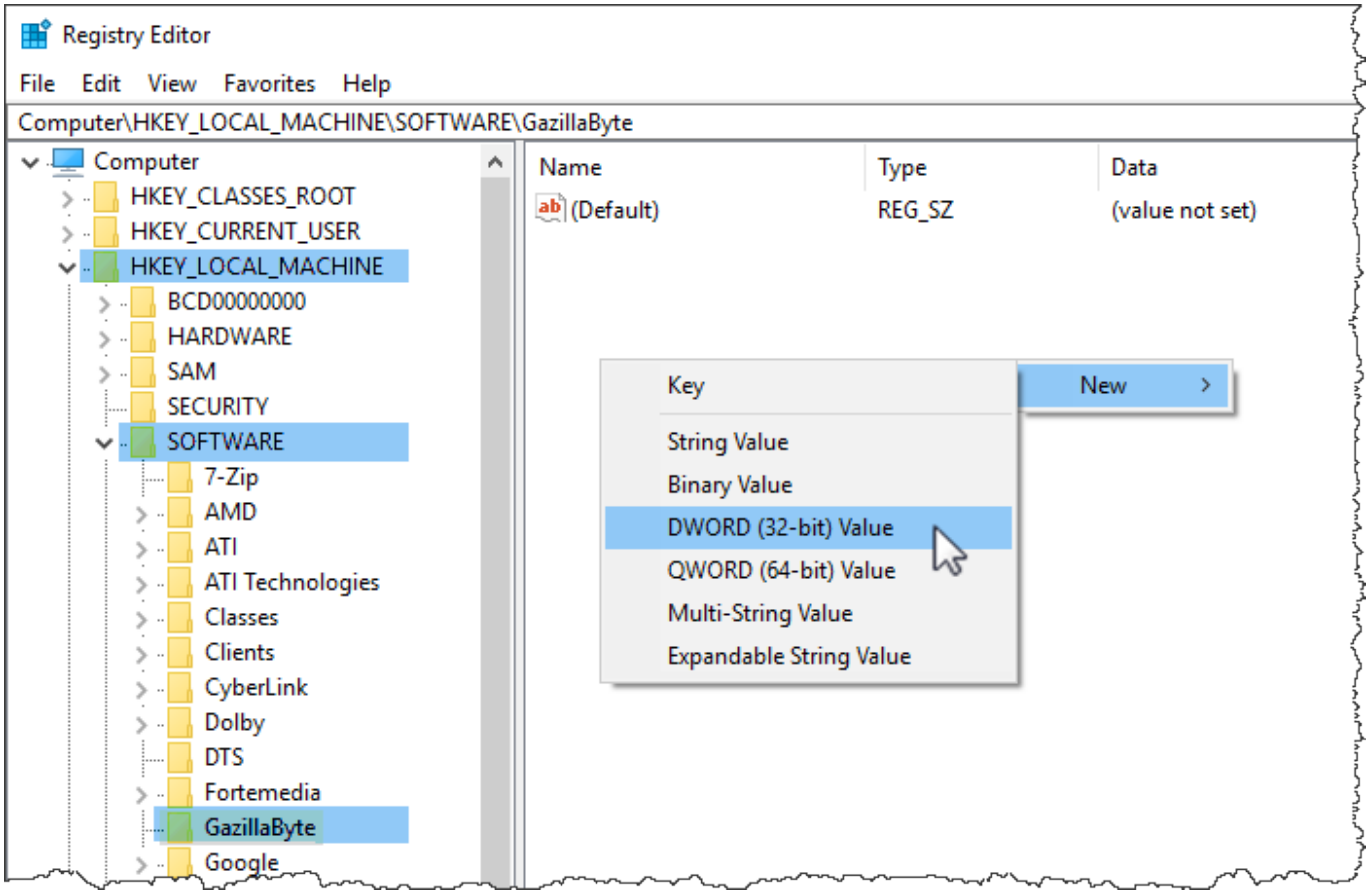

Backup the registry before any making any modifications

Open regedit and create registry backup by right clicking the top of the registry tree and selecting Export and saving to an appropriate location.

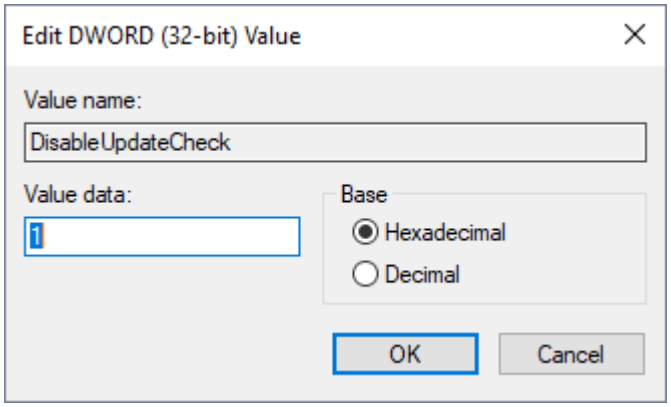

Adding Registry Key

In regedit navigate to HKEY_LOCAL_MACHINE\SOFTWARE\GazillaByte.
Right click in main window and select `New - DWORD`.

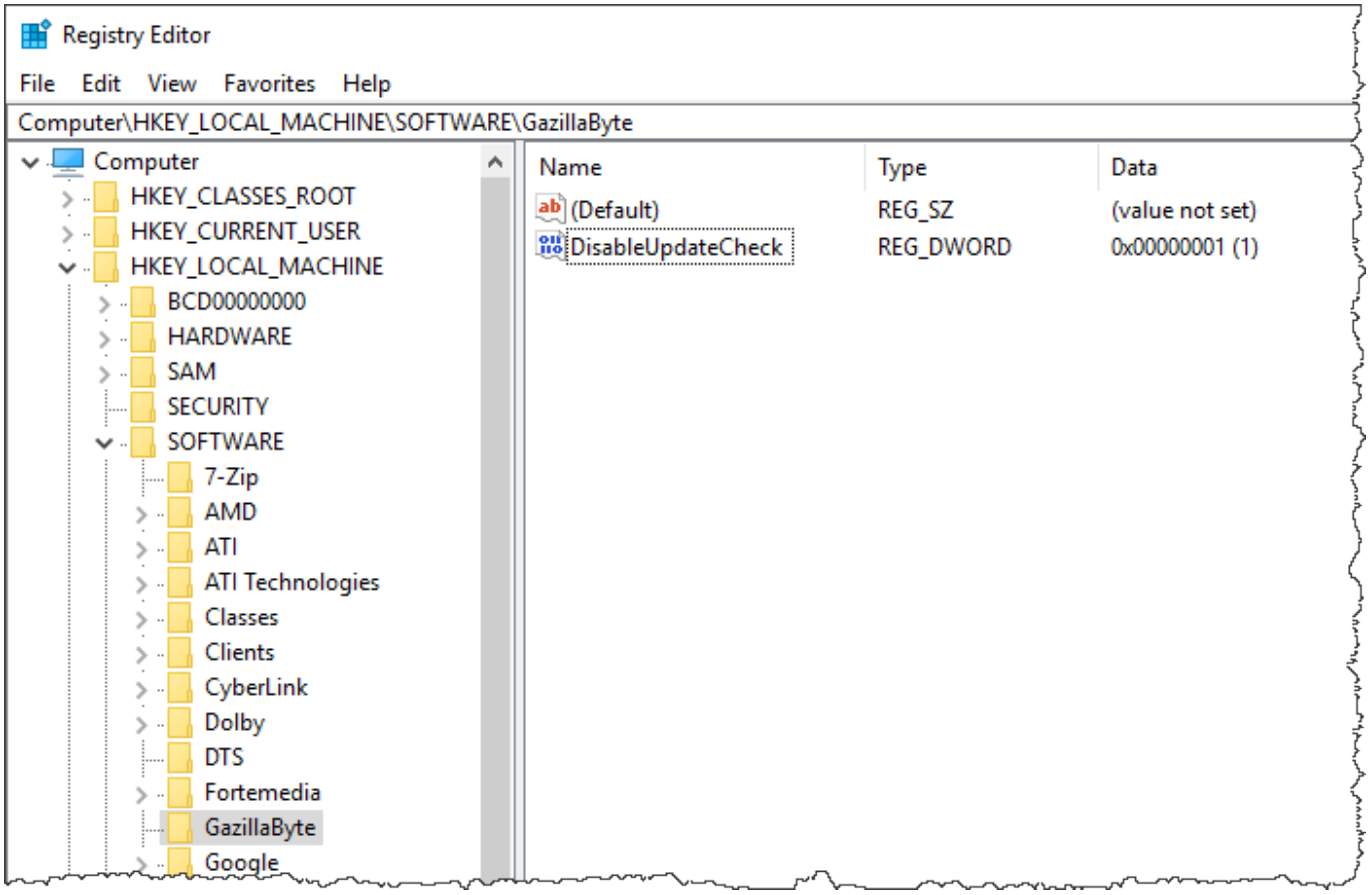

Right click the newly created key and select `rename`.
Give the key the name **DisableUpdateCheck**.

Double click the key and set the value to **1**.

Once complete your registry will have the added key with the value of one, Tapetrack will no longer check for updates.

Close regedit by clicking File - Exit. You can add a registry key to disable this functionality.
