TapeTrack Server Connection via URL Protocol Handler

When TapeTrack Lite and TapeTrack TapeMaster are installed, the InstallShield installer will register each respective product as a URL Protocol Handler.

This allows one of the respective products to be launched from a webpage URL or Windows Shortcut.

The protocol is registered as **tapetrack**.

Example

Connect as user testuser with password testuser to server testbed.tapetrack.com on port 5000 by clicking:

<html> Click Here </html>

```
tapetrack:\\testuser:testuser@testbed.tapetrack.com:5000
```
