TapeTrack Server Connection via URL Protocol Handler

When TapeTrack Lite and TapeTrack TapeMaster are installed, the InstallShield installer will register each respective product as a URL Protocol Handler.

This allows one of the respective products to be launched from a webpage URL or Windows Shortcut.

The protocol is registered as **tapetrack**.

If both TapeTrack TapeMaster and TapeTrack Lite are installed, the Protocol Handler will be associated with the last product installed.

Example

Connect as user testuser with password testuser to server testbed.tapetrack.com on port 5000 by clicking:

<html> Click Here </html>

<sxh> tapetrack:\\testuser:testuser@testbed.tapetrack.com:5000 </sxh>
