

Dynamic Attribute Lists

Dynamic Attribute Lists provide a flexible selection mechanism by automatically populating available options based on the Volumes previously entered values.

This approach maintains consistency across Attribute Values by encouraging reuse of existing entries—minimizing spelling variations (e.g. Removed vs removed) and streamlining data entry.

Unlike fixed lists, dynamic lists also support the addition of new values as needed, ensuring adaptability while preserving uniformity and reducing repetitive typing.

Creating A Dynamic Attribute

Right click on the required Customer-ID and select **Properties**

Expand the first available Extended Attribute, fill in the required fields:

- Label: Identifiable description eg Pool
- Type: Dynamic
- Featured: True displays the attribute in the [Custoer Tree Attribute View](#)
