

AddTranslationFromFile

Translate the value of a field based upon the current value of the field, where the current value can be loaded multiple times using the contents of a file.

Phase

This instruction is used by the TapeTrack Import Engine.

Syntax

```
AddTranslationFromFile(field, filterfile, translation);
```

Variable	Type	Description	Min Length	Max Length
field	String	The field to be translated.	1	128
filterfile	String	A file containing filter values to compare against the current field value.	1	256
translation	String	The new value of the field. This can either be a new literal value, or the original value with a prefix or suffix.	1	256

See the notes section for [AddTranslation](#).

Example

Append L3 to each VOLUME field if the value matches a pattern within a record of c:\data\LT03Volumes.txt.

```
AddTranslationFromFile(VOLUME, "c:\data\LT03Volumes.txt", "*L3");
```
