# AddTranslationFromSQL

Translate the value of a field based a list of items loaded via an SQL query.

## Phase

This instruction is used by the TapeTrack Import Engine.

## Syntax

```
AddTranslationFromSQL(field, sql);
```

*string field;*
*string sql;*

| | |
|---|---|
| field | The field to be translated. |
| sql | An SQL query to run to extract translation pairs. |

### Example

#### AddTranslationFromSQL: Translate based on the values in a table.

```
AddTranslationFromSQL(VOLUME, “SELECT volume,barcode FROM barcodetable”);
```

import engine, sync engine
