

AddTranslationFromSQL

Translate the value of a field based a list of items loaded via an SQL query.

Phase

This instruction is used by the TapeTrack Import Engine.

Syntax

```
AddTranslationFromSQL(field, sql);
```

string field;

string sql;

field	The field to be translated.
sql	An SQL query to run to extract translation pairs.

Example

AddTranslationFromSQL: Translate based on the values in a table.

```
<sxh> AddTranslationFromSQL(VOLUME, "SELECT volume,barcode FROM barcodetable"); </sxh>
```
