

# SetFile

Set the path to the source text file.

## Phase

This instruction is used by the TapeTrack Import Engine.

## Syntax

```
SetFile(filepath);
```

string *filepath*;

|          |                                                                                                               |
|----------|---------------------------------------------------------------------------------------------------------------|
| filepath | Path to the file that will be processed. If no SetFile and no SetODBC specified engine will default to stdin. |
|----------|---------------------------------------------------------------------------------------------------------------|

## Example

**SetFile: Set the input file to c:\data\tapetrack\control-t.txt.**

```
SetFile("c:\data\tapetrack\control-t.txt");  
import engine, sync engine
```
