setmovedateformat

SetMoveDateFormat

Define the way that the MOVEDATE field should be converted into a date value.

Phase

This instruction is used by the TapeTrack Synchronization Engine.

Syntax

SetMoveDateFormat*(filepath);*

string filepath;

filepath	The full or relative path to a file that you wish to embed.

It should be noted that by the time this function is run the INI engine has already tried to resolve environmental variables so it is necessary to include two percentage symbols for each symbol that would usually be required by strptime(3).

Examples Example 2.7. SetMoveDateFormat: Extract the Move Date in format MM/DD/ YYYY. Extract(MOVEDATE, 10, 10, 0); SetMoveDateFormat(“m/d/%%Y”);
