Run TMSS10Ping From Lite

Ping TapeTrack Server allows you to ping the TapeTrack Framework Server, using TMSS10Ping, from within TapeMaster, negating the need to open a command prompt and run the program from there.

Unlike the ping command which sends ICMP echo packets, `TMSS10Ping` sends payload packets via the TCP/IP protocol. This means that even if a firewall is configured to block ping requests, if TapeTrack connections are allowed, then `TMSS10Ping` packets will be successful.

The settings to execute `TMSS10Ping` via the Lite menu are contained in the Lite Config file. **These settings need to be customised to your values before the command will execute successfully.** Default settings will connect to localhost.

Execute TMSS10Ping

From the drop down menu in Lite select `Ping TapeTrack Server`.

Lite will open a command prompt window and execute `TMSS10Ping` and display the results
