

Server Options

The Server Options allow global settings for Customer, Data Clusters and Simple Management Rules in one location.

Server Options

Options

Options tab allows entry for:

- Extension Characters or additional characters that can be used in identifiers such as Data Clusters
- Customer-ID Filter. Set acceptable Customer ID filters to enforce format rules. e.g. ???? will force all customer ID's to be four characters.
- Friday Weekend. Setting to true will start the weekend on Friday, false will start the weekend on Saturday.
- Active Directory Group that is checked to ensure user can login. If left empty the group 'TapeTrack Users' will be checked if the user profile enables that option.
- Volume Stages. A list of volume stages, delimited by semicolons. e.g. Ordered;Used;Destroyed

Public Holidays

The Public Holidays tab provides an area to set holidays that should be avoided by Simple Management Rules.

To add a holiday right-click and select add and the position for the new entry (before, after or end). This will create a new holiday with a sequential Index number and a description of **"New"**.
