

Adding and Maintaining a Zone

A **Zone** is a **TapeTrack Object** which represents a physical storage location. Once created a Zone is then mapped to one of more **Repositories** to facilitate one or more contiguous physical storage locations for a given virtual location.

Adding a Zone

From the Main Menu, select Administration→Zone Administration.

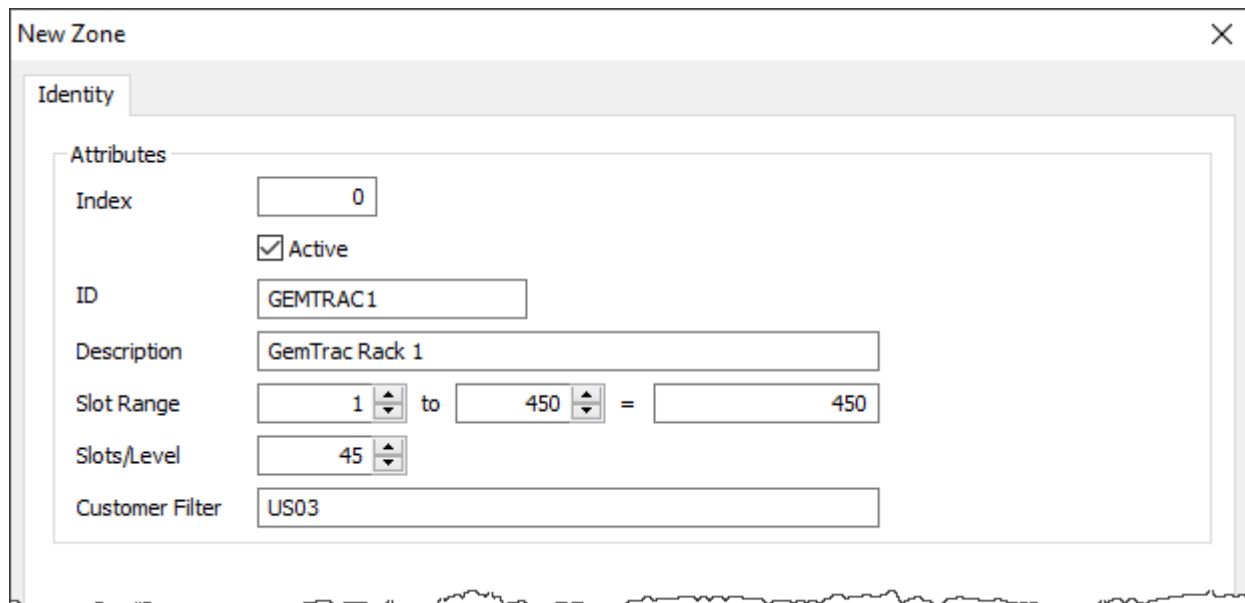

From the Zone Tab, click in the Zone List Window, and then Right click to select Add from the Context Menu.

The Identity Tab

In the Identity tab the Zone properties are:

- **Zone ID** this represents a 1 to 10 character assignable ID for the Zone.
- **Zone description** this represents a long form description of the Zone.
- **Total number of slots** this represents the total number of slots that the Zone contains.
- **Number of slots per row (optional)** this represents the number of slots in each row of the Zone.
- **Customer filter (optional)** this defines which Customers will see the specific Zone when assigning Zones to a Repository.
