Generation Dispersement Table

The Generation Dispersement function displays a table of selected volumes based on their generation (ie. LTO 1, LTO 2) and current scratch (Z flag) status.

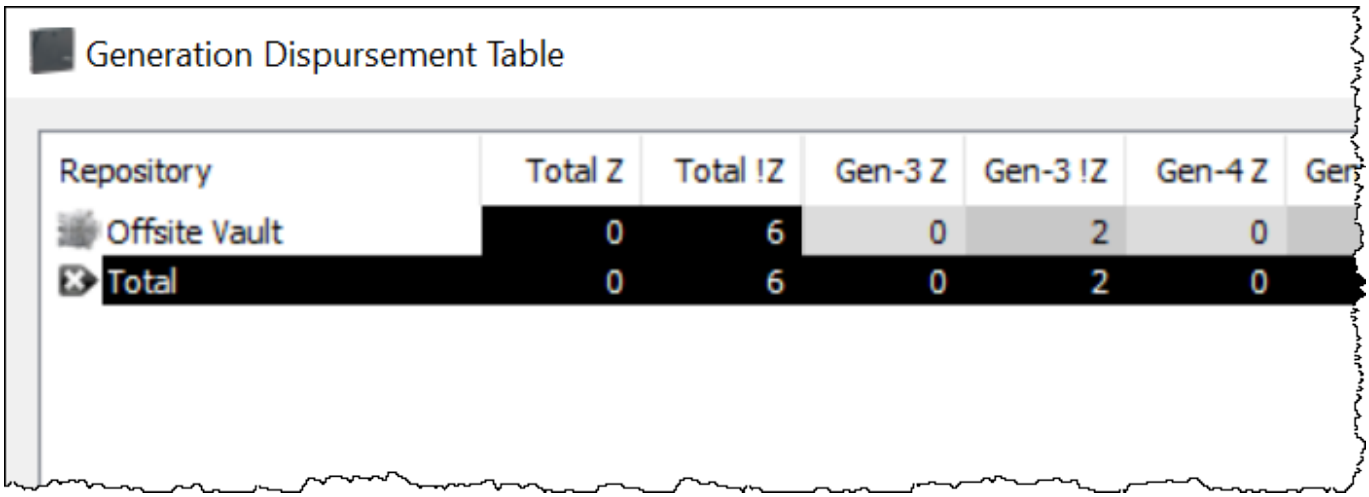

View Generation Dispersement Table

Select volumes to be included in table by either right click in the volume window and `Select` → `All` or Ctrl + A to select all, or range select by shift + click and/or Ctrl + click.

Right-click highlighted volumes and select `View` → `Generation Dispersement Table`.

Volumes are displayed in columns showing total, generational totals scratch (e.g. LTO & Z) and generational totals not scratch (e.g. LTO & !Z).

Close the report by clicking the X at the top right corner.
