Inventory Tab

From the inventory tab you can view where your volumes are, moving to, volume move dates, descriptions (and other attributes), view library health statistics as well as create reports.

Displayed Information

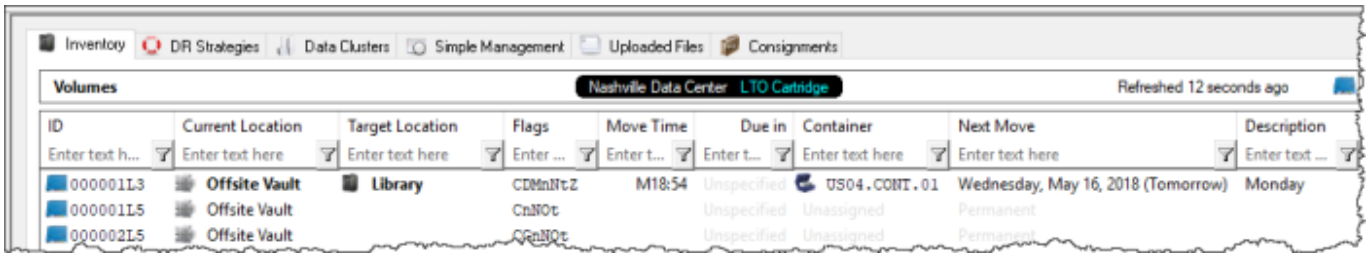

Header Bar

Customer Description (if customer has no description customer ID will be displayed). Media Description (if media has no description media ID will be displayed). Time since data has been refreshed with server.

Main Volume Window

- Volume ID : Unique identifier for each volume.
- Current Location : The location where a tape is believed to be, or last confirmed at.
- Target Location : Location volume is/should be moving to.
- Flags : Volume Flags represent one or more Boolean statuses of a single tape volume.
- Move Time : Amount of time the volume has been in a move status.
- Due In : Amount of time left until the volume becomes errant or overdue at target repository.
- Container : Container ID volume has been assigned to.
- Next Move : Date for next move, executed by TMSS10MovePending and TMSS10MoveLocation.
