Scan To Assign Slots

Overview

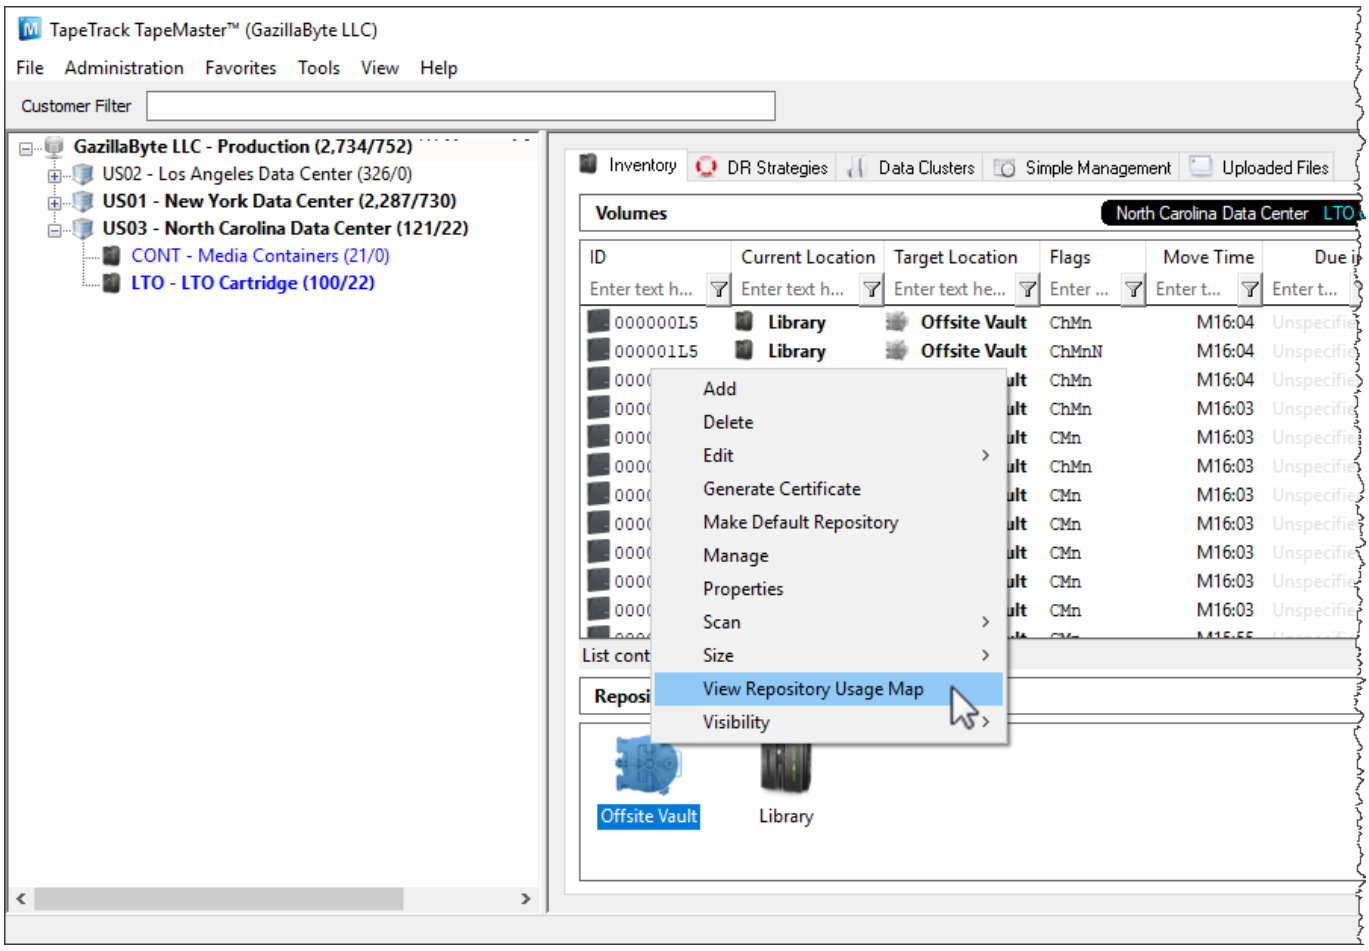

The Scan to assign slot function allows you to select a zone and slot/s to allocate a group of volumes too using a barcode scanner.

Scan To Assign Slots

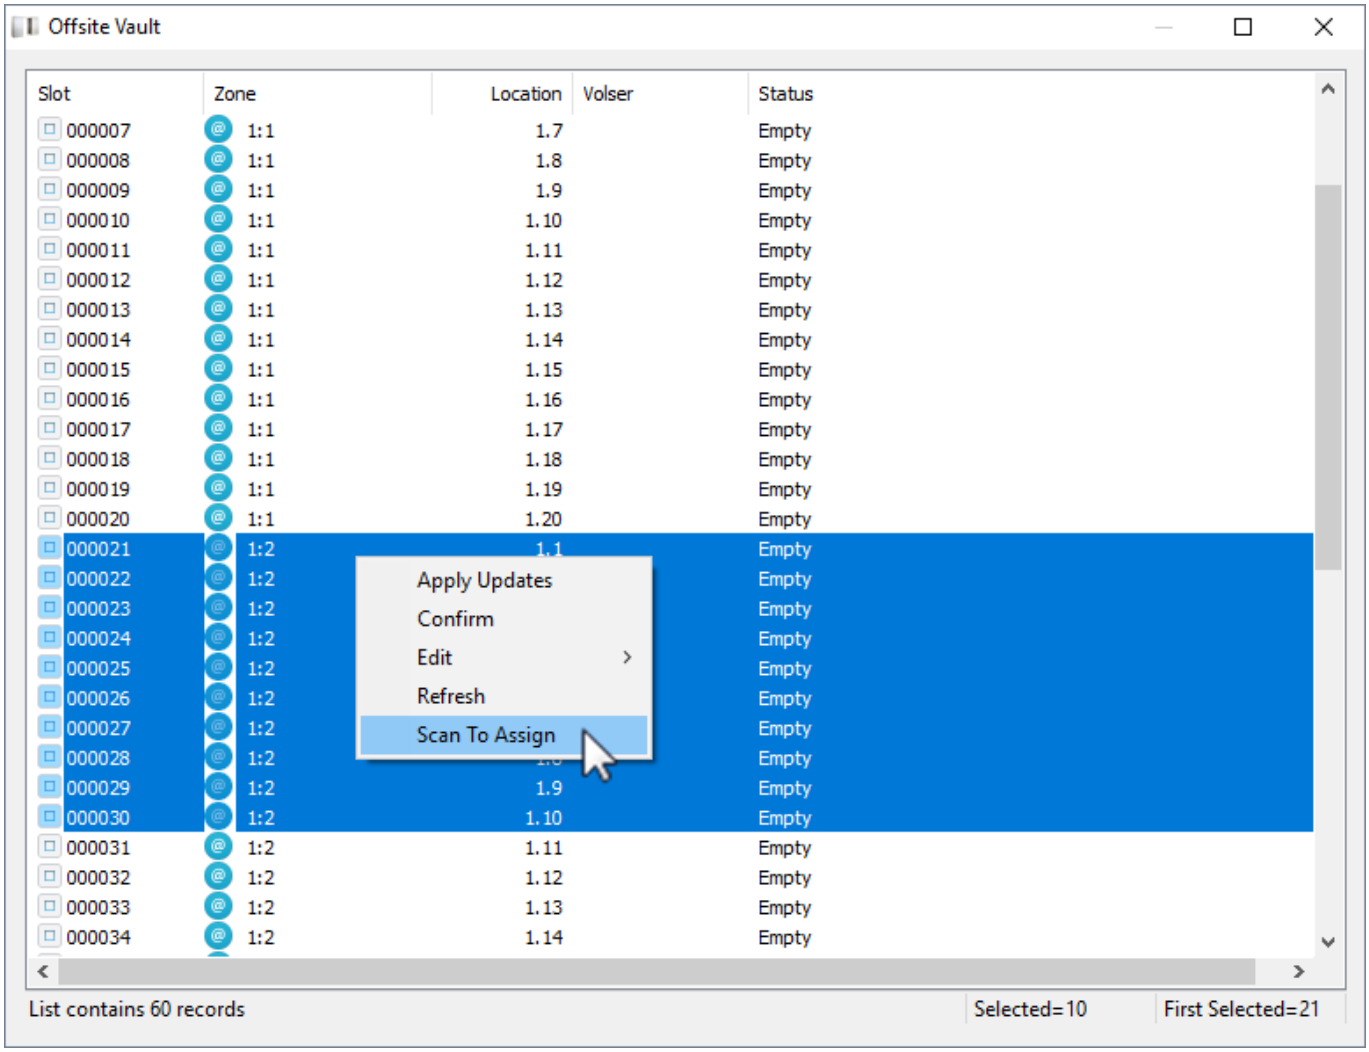

To use this functions you must have zone/s assigned to the select repository with sufficient vacant slots.

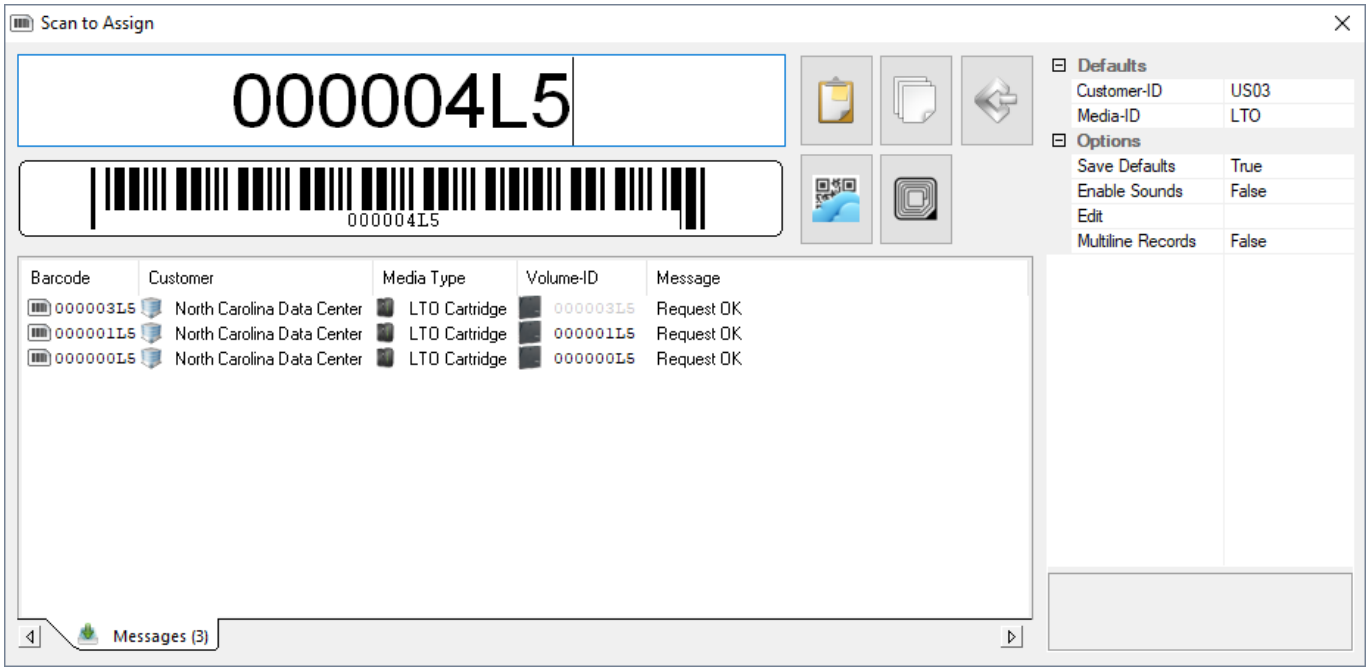

With the required customer and media type open, right click the repository to assign the slots for and click `View Repository Map`

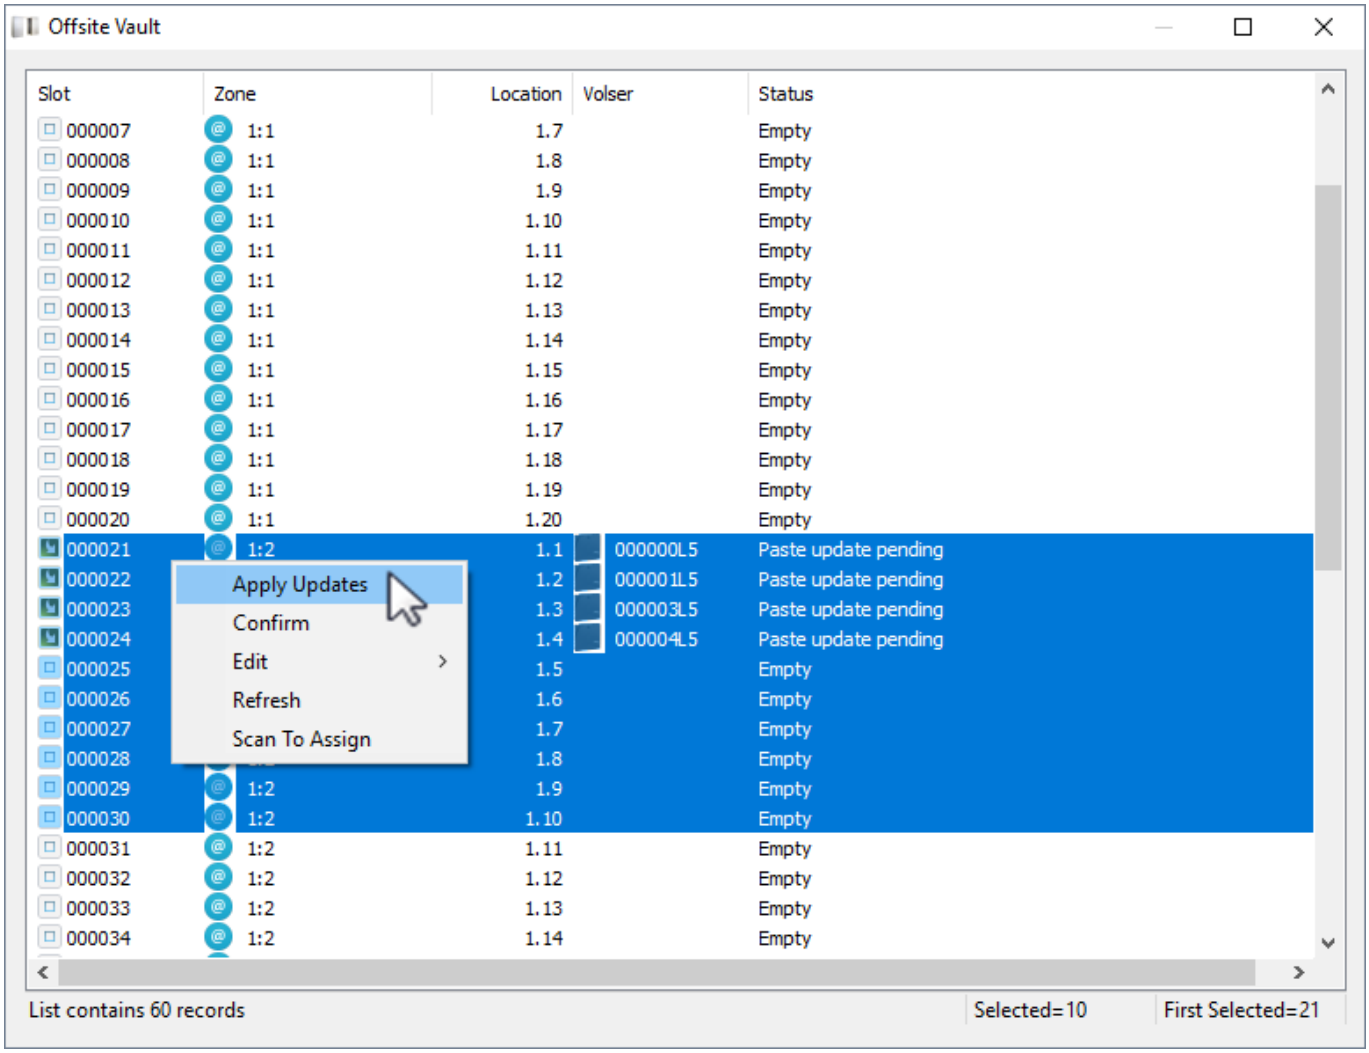

Select the range of slots (control + shift click or control + click) from the required zone/s. Right click highlighted slots and select `Scan to Assign` to open the scan in window.

Scan the volumes in using a barcode scanner in the order you want them slotted.

Once the volumes have been scanned, close the scan window. Right click the highlighted volumes and select `Apply Update` to save the changes to the database.

The volumes will now be in a **move status** in TapeMaster.
