

Setting A Password

There are several reasons to set or change passwords in TapeTrack such as restricting unauthorized access, good security practices or re-instating disabled user.

As a password is a secure login credential to access TapeTrack, best password practices should be employed when setting or changing user passwords.

If using Active Directory authentication, local TapeTrack passwords will not be referenced when a user logs in (with No MD5 box checked on login screen) but can be used to reset access when a user account has been disabled or revoked.

Changing A Password For Current User

Open the password utility by selecting File → Reset Password from the main menu.

Setting Your Own Password

In the **Password change** window, enter:

- your current password
- new password
- verify new password

Click OK to update your password and return you to TapeMaster.

Randomly Generate Password

Click the Random button to enter a randomly generated password into the password fields. This will also open a Random Password Set window displaying the password value. To aid you recording this password value, you have the options:

- Click the Copy password button to copy generated password to your clipboard.
- Clicking the Copy message button will give you the text “ A new TapeTrack User-ID has been created for you to use. You can access this account using the User-ID (Current User) and the password(B@7NpJ%7GR)” copied to your clipboard for convenience when sending a message to the user with login details.
- Clicking the Email message button will open up your default email client with the same text as Copy message.

Click OK to close the Random Password Set window.

Enter your current password in the Current Password field.

Click OK to update your password and close the Password Change window.

Changing Other Users Passwords

If the menu option **Administration** is greyed out and inaccessible, you do not have sufficient privileges (tapemaster rights) to change others passwords

From the main menu select Administration → Group/User Administration.

Connection 127.0.0.1 uses AES 256 bit encryption

Right click on the required User-ID and select from the popup menu, Management → Reset Password to open the **Password Change** window.

If you don't see the Management menu when right clicking on a User-ID, please see [Previous release method](#) for resetting passwords

A dialog box titled "Password Change" with a yellow padlock icon. It contains a large padlock image at the top. Below it, there are three input fields: "User" with the text "newuser", "New Password" with masked characters, and "Password (again)" with masked characters. A "Random" button is located below the "Password (again)" field. At the bottom are "OK" and "Cancel" buttons.

Password Change

User: newuser

New Password: [masked]

Password (again): [masked]

Random

OK Cancel

Insert new password in the New Password field.

Type password in the Password (again) to confirm.

Alternatively, click the Random button to open the **Random Password Set** window.

A dialog box titled "Random Password Set" with a yellow padlock icon. It contains a message: "A randomly generated password has been created for the new user. This password can be reset to a more user friendly password by the Administrator or it can be reset by the User." Below the message is a large text box displaying the password "B@7NpJ%7GR". At the bottom are three buttons: "Copy password", "Copy message", and "Email message". An "OK" button is at the bottom right.

Random Password Set

A randomly generated password has been created for the new user. This password can be reset to a more user friendly password by the Administrator or it can be reset by the User.

B@7NpJ%7GR

Copy password Copy message Email message

OK

Click the Copy password button to copy generated password to your clipboard.

Clicking the Copy message button will give you the text " A new TapeTrack User-ID has been created for you to use. You can access this account using the User-ID (Current User) and the password(B@7NpJ%7GR)" copied to your clipboard for convenience when sending a message to the user with login details.

Clicking the Email message button will open up your default email client with the same text as Copy message.

It is a good practice to have any user you change the password for to have them [reset](#) their password

the next time they logon.
