Barcode Validation Utility

The Barcode Validation Utility in the Tools Menu verifies if a Barcode has a corresponding Barcode Rule in Barcode Administration.

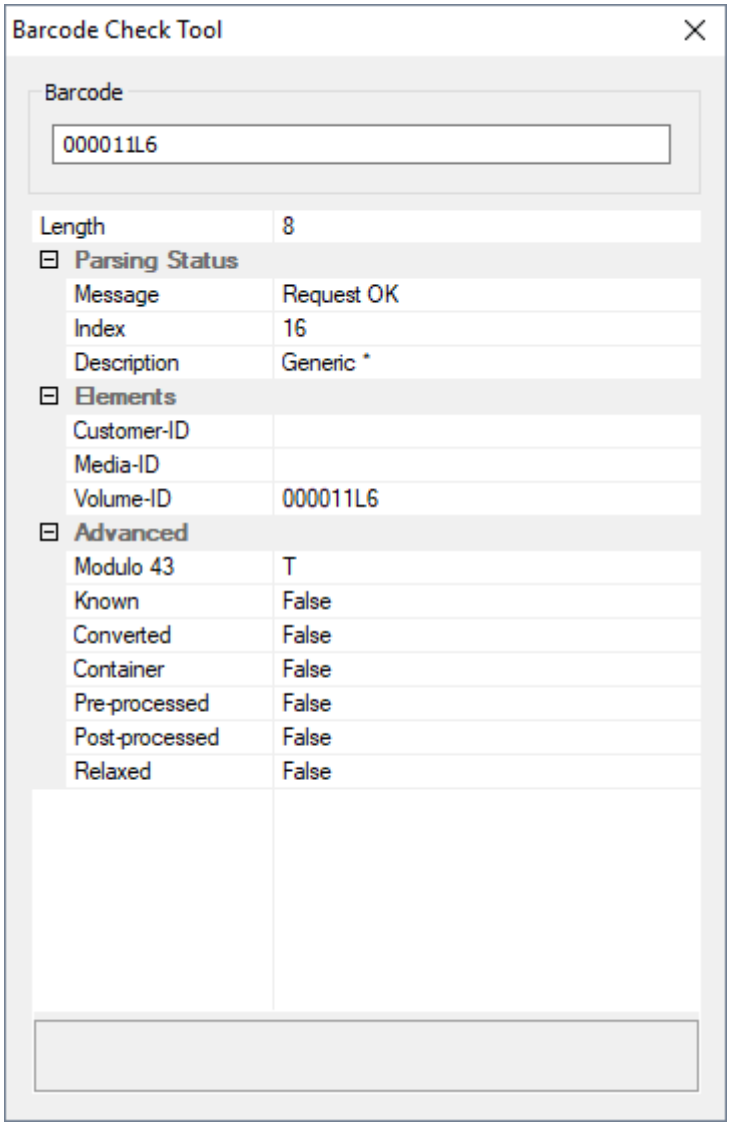

Using Barcode Validation

Using a Barcode Scanner or a keyboard, enter a Barcode into the Barcode field.

In the Status field, the Barcode Validation Utility will either display **Request OK** if there is a corresponding Barcode Rule in Barcode Administration or **Unsupported Barcode Format** if there is not.

If the status displays **Request OK**, other information pertaining to that Barcode will display, such as its Customer-ID, Media-ID, and Volume-ID.
