

Barcode Validation Utility

The Barcode Validation Utility in the Tools Menu verifies if a Barcode has a corresponding Barcode Rule in Barcode Administration.

Barcode Check Tool

Barcode
000093L4

Length 8

☒ **Parsing Status**

Message	Request OK
Index	16
Description	Generic *

☒ **Elements**

Customer-ID	
Media-ID	
Volume-ID	000093L4

☒ **Advanced**

Modulo 43	.
Known	False
Converted	False
Container	False
Pre-processed	False
Post-processed	False
Relaxed	False

Using Barcode Validation

Using a Barcode Scanner or a keyboard, enter a Barcode into the Barcode field. In the Status field, the Barcode Validation Utility will either display “Request OK” if there is a corresponding Barcode Rule in Barcode Administration or “Unsupported Barcode Format” if there is not. If the status displays “Request OK”, other information pertaining to that Barcode will display, such as its Customer-ID, Media-ID, and Volume-ID.
