# Paste Value By ID

Paste value by ID allows you to paste in Attribute or next move values from the clipboard by Volume-ID.

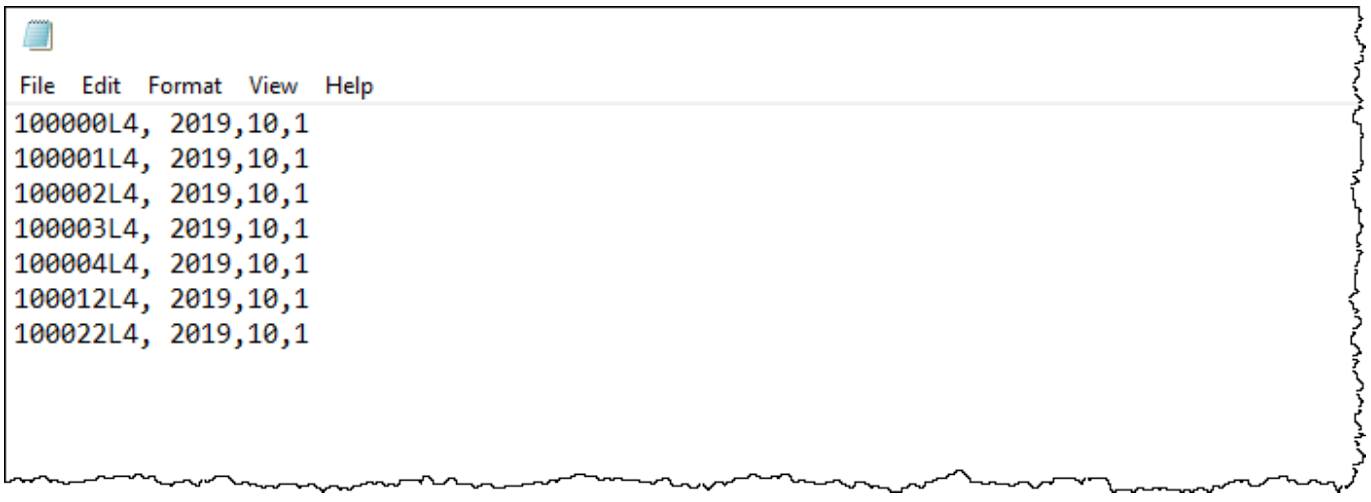

## Copy Values to Clipboard

Select Volume-ID's and values (Attributes or next move dates) and copy to windows clipboard from file (text, CSV or Excel) or email.

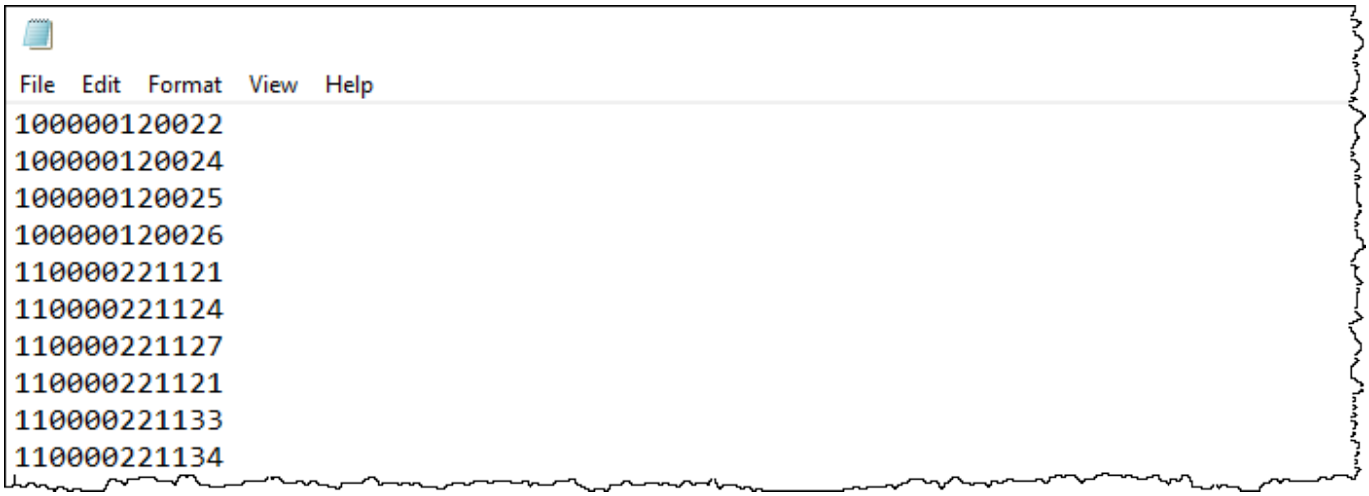

#### Attribute Values

#### Movedate Values

### Long Barcode Values

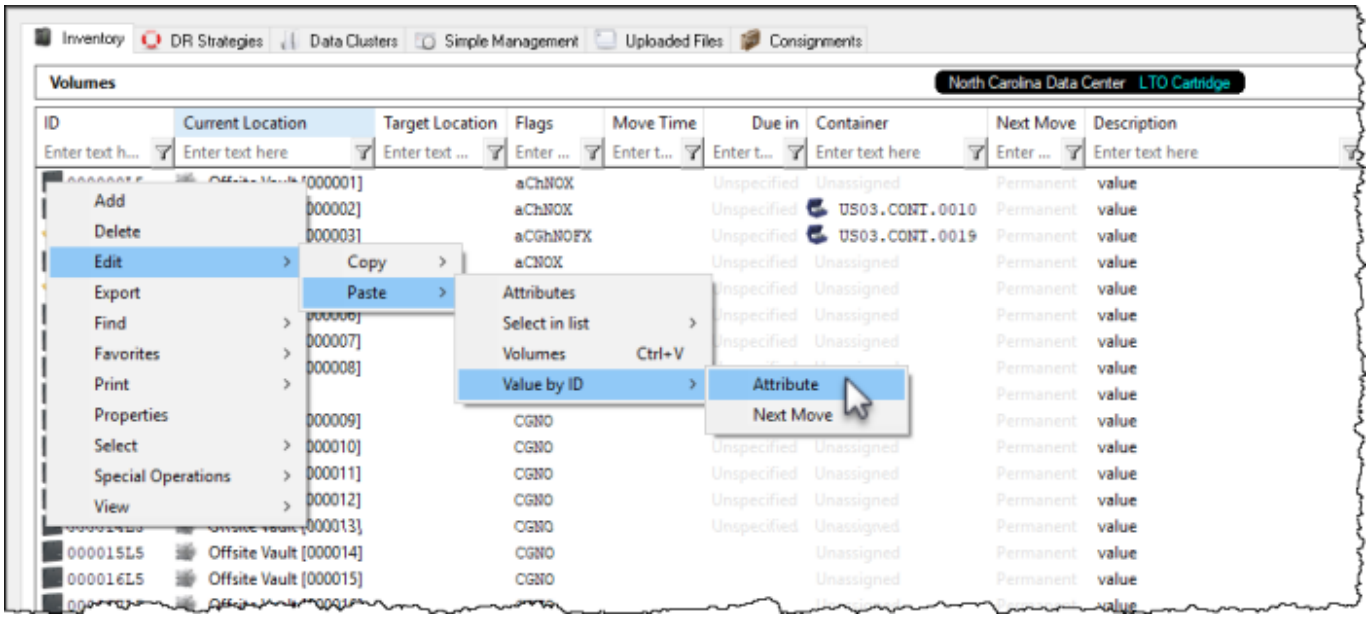

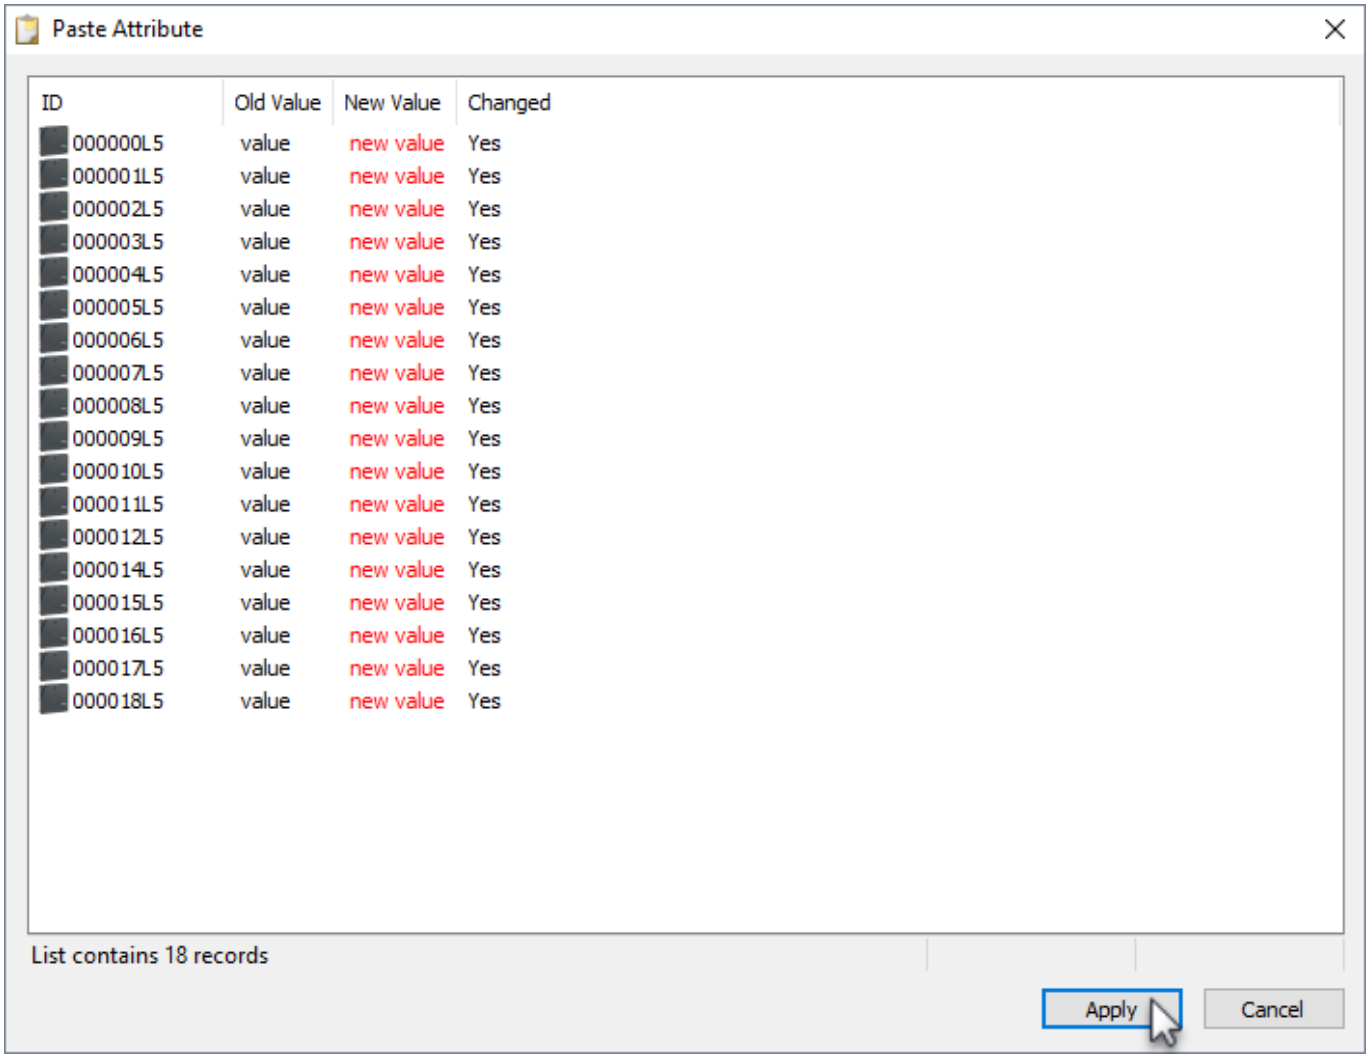

Long Barcodes in hashed format and extended Attribute `Long Barcode` must exist in TapeTrack before pasting in values

## Paste Values from Clipboard

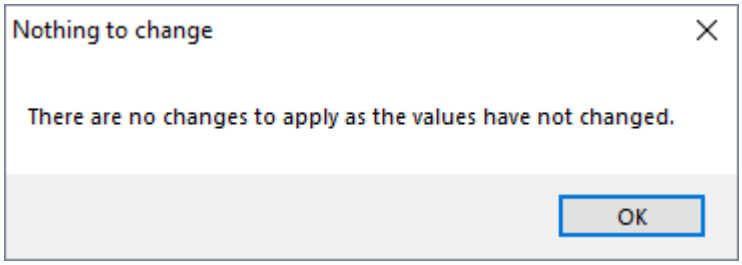

In the required media type, right-click in the inventory window and select `Edit→Paste→Value by ID` and then either `Attribute`, `Long Barcode` or `Next Move`.

This will open the **Paste Attribute** window with the Volume-ID's, old values and the new or updated values. If the information displayed is correct, click `Apply` to commit the data.

If there is no new data to apply to the volumes you will receive a popup stating **There are no changes to apply as the values have not changed**
