

Adding and Maintaining Volumes

Adding Volumes

Right-Click to add volumes

To add a Volume either:

- Right-click on a [Media Type](#) and select Add Volume
- Right click in the inventory window and select Add
- Press Insert on the keyboard when viewing the [Volume List](#).

In the Edit new volume window enter the volume ID of the new volume to be added and click Save.

Scan to Add Volumes

Right-Click in the Volume List, navigate to Special Operations, and select Scan → Scan to Add Volumes to use a Barcode scanner to add Volumes to your default repository.

To add volumes to a repository other than your default, right click the required repository and select Scan → To Add and scan volumes to be added.

Deleting Volumes

You must have **Alter** rights to delete volumes

Select the required volume, or range of volumes from the inventory window you want to delete.

Right click highlighted volume/s and select Delete, or press Delete (DEL) on the keyboard.

The **Volume Deletion** window will display the **Repositories** where the volumes to be deleted are located in the top pane and volume ID's in the lower pane.

If the **Volume Deletion** window is not displayed it is because you are running an outdated version of TapeMaster. Instructions to delete volumes in older versions of TapeMaster can be found [here](#)

Each row in the top pane will, along with the repository description (or ID), list the number of volumes for deletion and the delete status of either **Deletes Allowed** or **Deletes Forbidden**.

For any repository listed with a status of **Deletes Forbidden** you must either:

- Right clicking the row and selecting Allow to change status to **Deletes Allowed**
- Right clicking the row and selecting Remove to remove the volumes before deletion of any volumes located in a repository with **Deletes Allowed** status.

Click **Delete Volumes** and **Yes** to the delete confirmation to delete the volumes.

As deleting volumes is permanent, clicking **No** to the delete confirmation is your last opportunity to cancel the delete function.

When a volume is deleted its historical entries remain in the database. If a deleted Volume is added

back in to the database, all previous history records including when deleted and added back, are listed under that volumes History tab.

Edit Volume: 000000L5

Save Cancel Help

If required reset the repositories to **no deletes** by right clicking the required repository, selecting Properties and change the Allow Deletes field in the Options tab to false.

See [Special Operations Menu](#) for further information.
