Barcodes Use Modulo43

The Media Option `Barcodes Use Modulo43` checks scanned Volume-ID's for a Modulo43 check digit. If the barcode is verified as Modulo43, the check digit is removed before entry into TapeTrack. If the barcode does not qualify as a Modulo43 barcode, it is entered into TapeTrack without modification.

Options

- `True`: Barcodes with Modulo43 will have the check digit removed.
- `False`: Barcodes do not use Modulo43 check digits.
