

Repository Option: Highwater Offset

The [Repository](#) Option Highwater Offset lowers the [Slot](#) allocation below the total number of [Slots](#) currently allocated to this Repository.

For example if the total allocation of [Slots](#) to this Repository is 500, setting the Highwater Offset to 100 will stop TMSS10SlotAllocation assigning any Volumes above [Slot](#)400 (ie 500 total [Slots](#) - 100 Highwater Offset [Slots](#) = 400 assignable [Slots](#) (1 to 400)).

Highwater Offset Options

Number of [Slots](#) to make un-assignable.
