Repository Option: Highwater Offset

The Repository Option `Highwater Offset` lowers the Slot allocation below the total number of Slots currently allocated to this Repository.

For example if the total allocation of Slots to this Repository is 500, setting the `Highwater Offset` to 100 will stop TMSS10SlotAllocation assigning any Volumes above Slot 400 (ie 500 total Slots - 100 `Highwater Offset` Slots = 400 assignable Slots (1 to 400)).

Highwater Offset Options

Number of Slots to make un-assignable.
