Repository Option: Movement Mode

The Repository Option `Movement Mode` alters the behavior of Volumes when moved to this Repository.

Movement Mode Options

- `None`: No effect on Volumes.
- `Automatically Confirm`: Volumes are Confirmed when moved to this Repository
- `Bypass and move to Next`: Skips Move to this Repository and automatically moves to this Repository's Next Repository. Bypassing this Repository leaves no Volume History record.
- `Automatically Confirm then Move to Next`: Automatically Confirms the Volumes into this Repository and then places them in a Move to this Repository's Next Repository.
