Backups

It is critical that you regularly backup your TapeTrack Framework Server (especially because it is used to track backups and not only may if be required to help restore other systems).

To backup the TapeTrack database you should backup the following folders in the listed sequence:

1. /var/db
2. /var/dblogs

This backup can be performed using a utility such as tar, or ideally using a backup software agent to ensure that backups are performed regularly and successfully.
