Copying or Moving the TapeTrack Database to another machine

If you wish to copy the TapeTrack Database to another machine, or move it from the current machine to a new machine, you can follow these steps:

1. Install the TapeTrack Framework Server on the new machine.
2. Stop the TapeTrack Framework Server on both the old (source) and new (target) machines.
3. Delete (or rename) the `var/db` and `var/dblogs` directories on the target machine.
4. Zip the `var/db` and `var/dblogs` directory on the source machine.
5. Copy the Zip file to the target machine.
6. Unzip the Zip file to create a new var/db and var/dblogs directory on the target machine.
7. Start the TapeTrack Framework Server on both machines.
8. Get a new permanent or temporary license for the TapeTrack Framework Server on the target machine.
