Add TapeTrack Sync And Utilities To Linux

These instructions are based on installing Linux Intel 32 Bit on Fedora from the command line using yum and wget. If installing on other Linux systems please make any adjustments required.

Downloading RPM

Instructions to download RPM use wget, if required install wget

```
yum install wget
```

Download latest RPM's from https://mirror-us.tapetrack.com/releases/Linux-x86/
(other Linux installations are available at https://mirror-us.tapetrack.com/releases/)

Example

```
wget
https://mirror-us.tapetrack.com/releases/Linux-x86/tapetrack-clients-2021.3-1.i686.rpm
wget
https://mirror-us.tapetrack.com/releases/Linux-x86/tapetrack-server-2021.3-1.i686.rpm
```

Install Dependencies

While you may have some of these dependencies installed trying to install them again will only let you know they already exist.

Dependencies required:

- glibc*.i686
- zlib.i686
- libssh.so.*
- libcurl.so.4
- libstdc++-devel.i686

Example

```
yum install glibc*.i686
```

Install RPM

Install tapetrack-clients-2021.3-1.i686.rpm

```
rpm -i tapetrack-clients-2021.3-1.i686.rpm
```

technote, sync, linux, util, install
