Technical Note: Configuration File

Tapemaster Configuration File

Lite Configuration File

Modifying config file in TapeMaster and Lite to remove slot display.

This modification alters the way TapeMaster and/or Lite display the slotted volumes location. it is also a local modification, which means it only affects the local installation of TapeMaster and Lite, so will need to be executed on all local machines you want to alter the display on.

As it is a local modification it has no effect on the data stored in the database.
