lite Configuration File

To modify Lite, open `TMSSLite.cfg` in a plain text editor such as Notepad. TMSSLite.cfg can be found in the TapeTrack/Lite install directory (default `C:\Program Files\TapeTrack\TapeTrack Lite`).

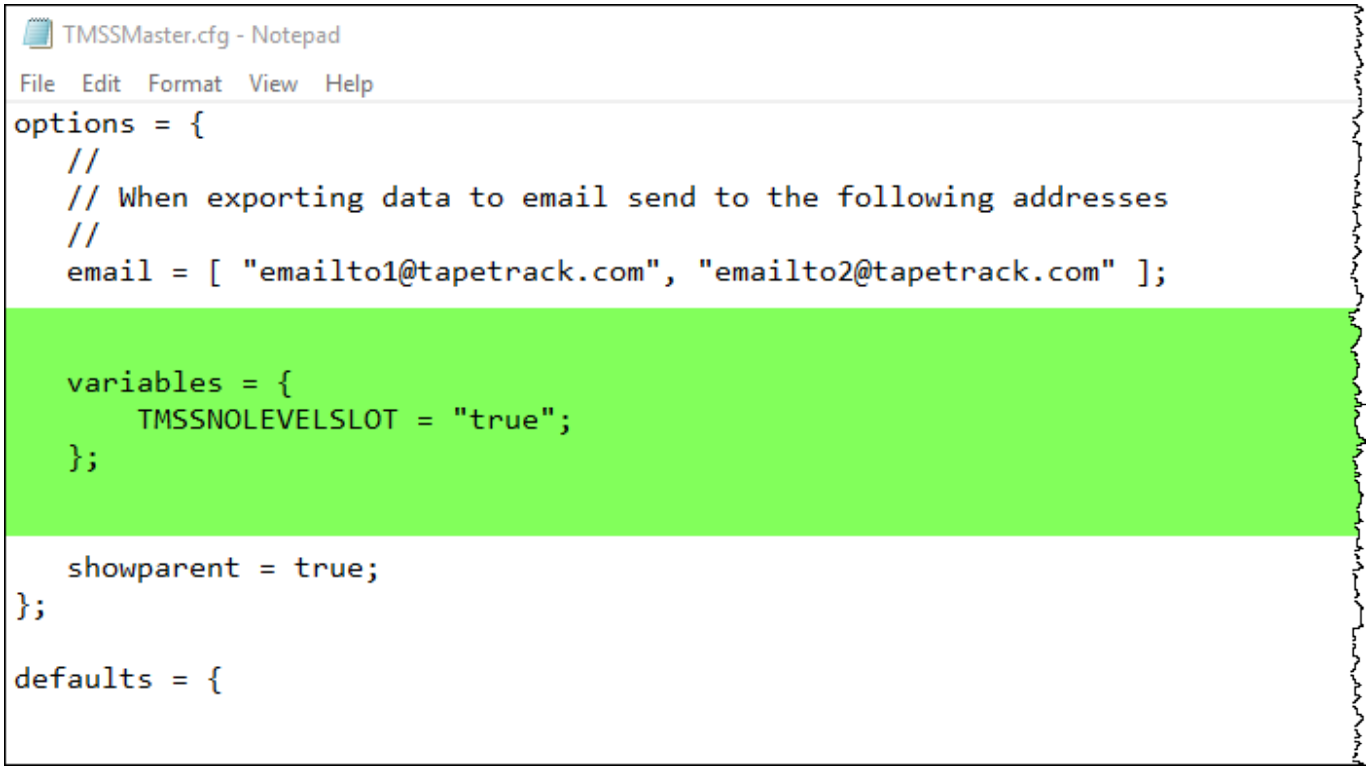

Remove Slot Level Display

Locate the section **variables**

Remove comment tags /* & */ from above and below variables.

Change the line of code
TMSSLEVELNAMES = “A,B,C”;
to
TMSSNOLEVELSLOT = “true”;

and save file, making sure to save with the file extension .cfg and not .txt
