

lite Configuration File

To modify Lite, open `TMSSLite.cfg` in a plain text editor such as Notepad. `TMSSLite.cfg` can be found in the TapeTrack/Lite install directory (default `C:\Program Files\TapeTrack\TapeTrack Lite`).

Remove Slot Level Display

Locate the section **variables**

```
TMSSMaster.cfg - Notepad
File Edit Format View Help
options = {
    //
    // When exporting data to email send to the following addresses
    //
    email = [ "emailto1@tapetrack.com", "emailto2@tapetrack.com" ];

    /*
    variables = {
        TMSSLEVELNAMES = "A,B,C";
    };
    */

    showparent = true;
};

defaults = {
```

Remove comment tags `/*` & `*/` from above and below variables.

Change the line of code

`TMSSLEVELNAMES = "A,B,C";`

to

`TMSSNOLEVELSLOT = "true";`

```
TMSSMaster.cfg - Notepad
File Edit Format View Help
options = {
    //
    // When exporting data to email send to the following addresses
    //
    email = [ "mailto1@tapetrack.com", "mailto2@tapetrack.com" ];

    variables = {
        TMSSNOLEVELSLOT = "true";
    };

    showparent = true;
};

defaults = {
```

and save file, making sure to save with the file extension .cfg and not .txt
